Even if this is your first time drawing *manga*, have no fear! You still should be able to create the *manga* you always wanted, provided that you read this book carefully.

Introduction

New, interesting *manga* can arise from doodles and thumbnail sketches!

Can you doodle? If you can doodle, then you have nothing to worry about, because you should also be capable of producing satisfying *manga*.

First, locate a blank sheet of paper that seems like a good candidate for drawing something interesting. This could be a piece of notebook paper, the flip side of a magazine flyer, anything. Needless to say, grab a pencil as well. Now, on top of that paper, draw anything you have thought up: something you saw or heard, a happy dream, something that moved you, anything. If you cannot draw, then write instead. These scribbles and sketches form the very foundation of a developed *manga*. Make a collection of such jottings to create an "idea notebook" of your very own. This notebook will contain loads of great ideas for creating formal *manga*. All you have to do is later collate those notes and sketches that appealed to you the most. Naturally, being motivated is also important. Never stop developing your idea notebook. Before you realize it, you will find yourself with an interesting story to tell.

Starting with

Drawing a Crab

① Could it be a rice cake?

② Or maybe it's a purse with a side pouch?

③ Add the eyes.

④ Add the claws.

⑤ Add the remaining legs, and voilà! A crab!

Give the crab an interesting facial expression.

B5 = 18.2 X 25.7 cm
or 6 1/4" X 10"

Later, collate your sketches using copier paper.

It's economical.

These make easy-to-see reference.

Notebook

Sketches can also be created by simply combining circles, squares, and x's.

Jot down all sorts of things about people. Sterile *manga* does not make reading interesting.

We better not tell our parents.

Go on a little treasure hunt.

Jot down the personality of different people and characters as well as environments.

Your sketches don't have to be perfect.

A fun doodle

That upper classman is a little prickly.

She lied. I wonder if she's the culprit. I'm beginning to doubt her... ♡ ♡ ♡

But, I love her.

I was wrong about her.

Name: Inspector Donan

Grandad

Jot down minor characters as well.

Write down bad things as well!

That jerk of a bully!

a Few Doodles — A Prelude to Formal *Manga*

It all starts with a word-chain game

After doing all that doodling, try playing a word-association game. Brainstorm and come up with as many connections as you can from any given item. The more you use your brain, the better you'll get at it. Another helpful game is word-chain where a following word must have as its first syllable the last syllable of the previous word in the chain. (In the case of English and other languages using an alphabet, use the last letter instead.)

The following is a Japanese word chain. Come up with as many connections as you can. (Nouns, verbs, and adjectives are all acceptable.)

A→anko (sweet bean paste)→korobu (to fall)→butsu (to hit)→tsuki (the moon)→kirin (giraffe)→rindou (gentian-a type of flower)→uma (horse)→machigai (mistake)→inu (dog)→nuigurumi (plush toy)→

Try connecting these concepts to form a story.

A horse saw a boy riding on the back of a huge stuffed giraffe toy and mistook the giraffe for another horse, bringing the boy with him to the world of horses—a land where gentian bloom and where lunch consists of sweet bean paste.

Continue stringing these concepts together until some sort of scenario forms.

What sort of story do you hope to illustrate?

Comedy?

A fun roller coaster-type storyline

OR

Story?

Little humor and with a dramatic storyline

???????? Which do you prefer ????????

The style or approach taken by a work of *manga* can generally be divided into 2 camps. The first is a silly, fun romp, full of comedy, while the other is a dramatic storyline built primarily around the interpersonal relationships of its characters. To which camp do you belong?

Comedy

Spin,
spin, spin,
spin

I am the king
of spinning
saucers!

Whoops!

A silly, fun romp

To which
camp do you
belong?

Story

Focus on interpersonal
relationships?

Nothing
is going
on.

What is going
on between
you and her?

For the word-association game, come up with a few concepts (nouns, verbs, and adjectives are all acceptable), and select 2 themes from amongst those concepts to create a story. Colors may also be used. (For example, if colors appear in your original group of words, then color can be a theme. For now, let's start with 4 colors.)

Red→fire engine→fire→smoke→coughing/choking
White→flag→fluttering→skirt→girl→puppy love
Blue→traffic light→walk→fall down→cry→cat
Yellow→green→leaves→flower→rose→honeybee

*Note: In Japan, a "blue" traffic light means "go."

Use 10 minutes to come up with a story. Use the concepts "when," "where," "who," and "did what" to bring your story together.

While smelling a rose, a girl was stung by a honeybee ...

Introduction

Gaining Familiarity with

Romance

To become acquainted with this genre, read a few romance novels and watch a couple of TV soap operas. Of course the most effective method would be to fall in love and experience heartbreak yourself in order to become able to express the joy and anguish associated with these experiences.

School

Try creating *manga* based on your experiences at school. Imbuing the story with a bit of your own emotions and feelings when you tell about fights between fellow students, experiences where a teacher has gotten angry with you, conversations that took place with friends after school, etc. will allow the reader to sympathize with the *manga*'s characters.

Take care when rendering the classroom desks.

Sports

Show consideration toward allowing readers who are unfamiliar with the sport to enjoy the story by including brief explanations of playing rules. Create a rival for the hero and have them play against each other. Establish clear goals for the hero: to become a regular starter, to win a championship, etc. Make your *manga* interesting by giving the characters human qualities and include a sports move or play guaranteed to finish off the rival.

Science Fiction

This genre is geared toward those with a penchant for things imaginary. If you have a talent for creating original worlds of which no one has ever dreamed or for creating new things, then you should definitely try your hand at sci-fi. Even if the overall scenario is simplistic, if you scatter it with fantastic elements then you have the potential for an interesting story. When creating sci-fi with a technology bent, make sure the mechanisms look cool. Give consideration toward a futuristic yet plausible design.

the Different *Manga* Genres— Making It Interesting

Action/Adventure

Aim for allowing the reader to experience a thrilling sense of excitement as characters overflowing with charm become involved in and resolve conflicts occurring in various different locales.

Historical

Carefully research the period you plan on depicting in your *manga*. Refer to books and museums for information. You will have difficulty transporting your readers into the story's internal world if the clothing, buildings, and effects do not match that of the day. Please note that the psychological or emotional aspects of the story should be shared with those experienced by modern society.

Occupational

One option is to imagine a profession you always thought you would enjoy and then come up with a story. Be sure to research carefully the work environment or your story will lack authenticity. Another viable option is to base your story on a job in which your father, mother, brother, or sister is or was engaged.

Horror/Thriller/Mystery

Listen to as many scary stories as people have to tell, and read as many books, and watch as many movies and TV shows as you can to study exactly what elements of the story, etc. are scary. This will serve as valuable reference when it comes time for you to create your own *manga*. When writing a mystery, start by devising an appropriate incident. The more puzzling the incident, the more interesting the story. Needless to say, the resolution to the mystery must be plausible.

Chapter 1

Materials and Simple Means of Usage

This chapter takes a look at the materials used to create *manga*. These are implements even a first-timer like yourself should have on hand. Do not worry and rush out to buy these now. Take your time and collect them at your leisure.

Materials 1

Collect the most basic and commonly used materials first.

First, we will discuss the materials you should have in order to create your own *manga*. Practice using pens, pencils, and other drawing implements until you become accustomed. Habitual practice while you are just starting out is the first step in becoming proficient.

White (Poster Paint)

This is used to apply patches of white in order to hide pen and pencil strokes that extend outside of intended lines and mistakes.

Inks

Drafting film ink dries quickly, making it difficult for the drawing to become soiled. Try using it. India ink is great for rendering solid patches of black; however, it takes a while to dry, so be careful when using it.

Long Straightedge
(Approx. 45 to 50 cm or 17 1/2 to 19 1/2")

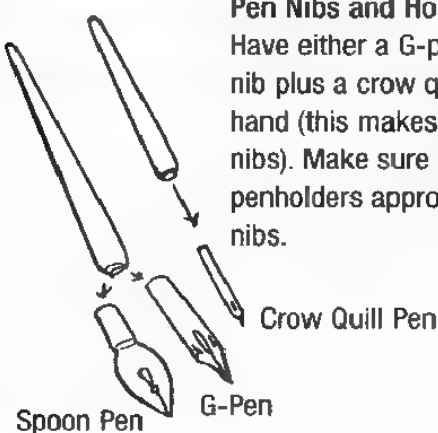

Straightedges

Straightedges are helpful tools, used for drawing margin or panel lines and for special effects. Purchase a long straightedge (approx. 45 to 50 cm or 17 1/2 to 19 1/2") and a short straightedge (approx. 10 to 20 cm or 4 to 7 4/5"). A triangle will come in handy as well.

Straightedge
(Approx. 10 to 20 cm or 4 to 7 4/5")

A Straightedge with a Beveled Side

Pen Nibs and Holders

Have either a G-pen or spoon pen nib plus a crow quill pen nib on hand (this makes a total of 2 nibs). Make sure you also have penholders appropriate for the nibs.

Pencil (Mechanical Pencil)

Common writing pencils and mechanical pencils are acceptable for use in drawing *manga*; however, a soft lead of around 2B is preferable.

Eraser

Any commonly shaped, white eraser that fits comfortably in the hand and easily erases large patches of drawing is perfectly suitable.

Felt-tip pen

Try to collect markers and pens that use water-resistant inks. These can be used for drawing margin or panel lines and for display lettering. The points should be between 0.1 and 0.8 mm in thickness. You will find it helpful to keep about 3 felt-tip pens on hand. Do a little research before purchasing your pens.

Liner and Script Brushes

Mensofude (Thin Brush Used Primarily to Render Facial Features)

Purchase 2 brushes: one for use with India ink and another for use with white poster paint and the like. As you will be using these to perform detailed work, buy finely tipped brushes. Once you become accustomed to using brushes, purchase a medium-sized (round) brush for covering large areas of solid black (for use in backgrounds).

B4-sized Manga Art Paper
(For Standard Publication Submission)

A4-sized Manga Art Paper
[For *Doujinshi* (fanzine) formatting]

Manga Art Paper

Use Kent paper or specialized art paper specifically for *manga* sold at an art supplies shop.

Tracing Paper

Tracing paper (or drafting vellum) is thin, transparent paper used to cover and protect the original copy or can be used for the original copy. Tracing paper comes both in rolls and in single sheet form.

Gathering the Necessary Materials

Once you have become accustomed to using the most basic materials, start collecting other implements.

Once you have become accustomed to using the most basic materials, start gradually collecting other implements.

Each artist uses different materials to produce *manga*. Even professional artists differ in the materials they select and find the most comfortable to use. Once you have become used to the most basic materials, try using the tools and materials appearing on this page.

Screen Tone

Screen Tone, which is used for backgrounds, for clothing, shading, etc., is virtually inseparable from *manga*. Collect a variety of different tone patterns and experiment.

Craft Knives

Craft knives are used to cut the paper used to render the drawing and screen tone. The more you become accustomed to *manga* production, the more you will find yourself using this tool. Take care not to cut yourself when using a knife.

Ruling Pen

This tool, which allows the artist readily to modify the thickness of the line produced by the ruling pen, is used to draw margin lines. However, the upkeep of this pen requires effort, plus it is somewhat tricky to use.

...allows for ease of cleaning.

Compass

Compass

Use a compass that accommodates changeable drawing implements, allowing you to use it in conjunction with a pencil or ruling pen.

Feather Brush

Use a feather brush to clean eraser bits off of the drawing. This tool is practically inseparable from *manga*.

French Curve

The French curve is terrific for rendering curved lines. Curves with beveled edges are easy to use.

Circle and Ellipse Templates

Like a French curve, templates are used to draw curved lines, circles, and ovals. Templates with beveled edges tend to be easier to use.

Wire Netting and Brush

These are used for spattering to create special effects.

Light Table

Used for tracing under drawings, etc., the light table contains a light source underneath, causing paper to appear transparent when placed on the table. Light tables are a bit pricey, so be sure to save up for one.

Tone Scrubber

While a craft knife could be used in place of this tool, it really is handy to have a tone scrubber, which is specifically designed for attaching and cutting screen tone.

Materials 2

What sort of materials are used to create a color copy?

Colored Markers

Use a finely tipped felt pen or marker for drawing contour lines. Fine-tipped pens enable you to color your drawing easily and are extremely handy for adding shade and shadow.

Low quality paper causes the ink to bleed.

High quality paper does not cause the ink to bleed.

Alcohol-based markers are useful in that they allow the artist to draw directly on top of copier paper and are transparent, allowing them to be used over contour lines without destroying the lines underneath. Using marker paper is designed specifically for use with markers and is bleed-proof.

Water-Resistant Black Ink

This is used for face contours.

Dr. Ph. Martin's Black Star

There are various brands that carry drawing and drafting film ink.

Liner and script brushes work well.

Drawing Ink

Be sure to use water-resistant ink when creating a color copy.

Holbein

Color Ink

Color ink tends to be highly transparent and is consequently used to render people.

Transparent Watercolor Pigments

Well-suited to painting backgrounds, these are transparent pigments and can be easily mixed on a palette..

Nontransparent Watercolor Pigments

These are the more common type of pigments found that everyone tends to use. Nontransparent pigments may be used to color backgrounds and are useful for painting on top of a pigment that you intend to obscure, such as when adding leaves on top of trees. Avoid using nontransparent pigments on faces: it could block out the facial features.

Contours rendered in water-based ink will bleed if a watercolor pigment is used on top.

Colored Screen Tone

Colored tone allows you simply to press a sheet of tone in the color of your choice to the drawing. Gold, silver, and fluorescent colors are also available.

Paints

Screen tone is expensive, so you may want to use attractive print paper instead.

Creating a Color Copy

Airbrush

The airbrush allows you to give depth and volume to your artwork, but you will need some time to become accustomed to using it. All you can do is practice!

Colored Pencils

Colored pencils do not allow for the creation of clean, brilliant colors, so use them only minimally in shading and hair.

This was created by using pastels over "mermaid paper" (paper with a crepe paper-like texture, but heavier).

Pastels

Pastels produce rough, uneven colors but do allow for light, pale finishes. Always spray fixative on pastels after use.

Fixative (causes the pastels to fix to the drawing surface)

Popularly Used Paper

Art Paper	This is well suited to the application of colors and watercolor pigments. Shop around for paper that an eraser will not cause to pill and that is bleed proof.
Kent Paper	This is well suited to the application of colors and watercolor pigments. Kent paper works well with pens, but colors tend to become blotchy and uneven.
Mermaid Paper	This is well suited to the application of colors and watercolor pigments. The crepe paper-like, bumpy texture results in a rough finish but does allow for ease in the application of inks and paints, allowing the pigments to show up brilliantly. It is often used in <i>Shoujo manga</i> .
Canson Paper	This is well suited to the application of colors and watercolor pigments. Canson paper tends to be a bit stiffer than mermaid paper. Pigments glide on easily.
Color <i>Manga</i> Art Paper	<i>Manga</i> art paper tends to differ depending on the brand, but it is terrific for beginners!

Materials 3

Software allows for the creation of exquisitely rendered color copies!

Software makes the addition of color a snap! Since any mistake can be easily corrected with software, even a beginner can produce a superb color copy, provided that he or she knows how to use it properly.

Scanner

The scanner allows you to scan an original drawing into the computer's memory. The minimum requirement for an adequate scanner is 300 to 600 dpi (dots per inch). The more dots per inch, the better.

Computer (Tower) and Monitor

Windows and Macintosh are the 2 mainstream operating systems. Macintosh seems to be more popular for graphics and illustration software. A 17" monitor or larger, a 350 MHz or higher CPU, and 256 MB or greater of memory are recommended.

Printer

The printer allows you to print out any drawing you create using the computer. Again, the higher the dpi, the better.

MO Drive (Magneto-Optical Drive)

This is often used to deliver a manuscript to the publisher and is necessary for making large amounts of data portable. CD-R is also excellent for this purpose.

Pen Tablet

Terrific for drawing lines and correction, the pen tablet allows you to draw directly into the computer.

Software

Paint Software
Photoshop
Painter

Illustration Software
Illustrator

Software tends to be pricey, so discuss purchasing with your parents.

Give illustration using software a try

Take a crack at using a computer to create *manga*; try using a pen tablet to draw and scanning your results..

1

Computer (Tower) and Monitor

Those using a pen tablet should use that to draw their artwork and then skip to step (3). Those using a traditional pen draw their artwork on paper.

This character's hair features many breaks between the hair contours.

For this character, there are no breaks between the hair contours.

OK

Good

2

Scanning

Use a 350 dpi or higher scanner to scan the line drawing into the computer. Next, adjust the brightness and contrast levels.

3

Adding Color and Layers

Use Photoshop or other paint software. The "airbrush" and "paint bucket" tools are incredibly helpful. Use of layers can virtually serve the same function as masking. Illustrator and other illustration software are useful for adding lettering such as for the title.

Layers

Oops! You went out of the lines!

Illustration software allows you to erase mistakes and mask areas not targeted if a line breaks or is disrupted.

4

Printing

A printer allows you to print out any images you created using the computer.

Steps in the Process

1

Organize a Rough Plan.

First generate a rough sketch of the story you intend to turn into *manga*. Next, develop a scenario according to the target number of pages.

2

Develop the Story.

Construct the story, giving it a beginning, having it develop, climax, and finally conclude. Develop the story, taking into consideration the images and character lines you intend to include before beginning a formal draft.

3

Panel Design, Adding Speech Balloons, and Under Drawings

Next, determine how the panels will be designed and add speech balloons. Start the under drawings, trying to keep them within the boundaries of the inner margin of the *manga* art paper.

Panel Design and Speech Balloons

Place any image you intend to feature in a large panel.

The figures in parentheses are *doujinshi* [fanzine] margin formatting. See more details on page 28.

4

Inking

Use a dip pen, a felt-tip pen, etc. to add ink on top of the under drawing. Add the background and special effects at this time as well.

The X indicates areas requiring solid black.

Drawing from left to right will prevent your hand from dirtying.

Keep a sheet of paper underneath your hand at all times to prevent it from causing ink or pencil markings to smear. Use a feather brush and/or tissue to sweep away eraser bits.

5

Spotting Blacks and Attaching Screen Tone

Go through the artwork and add blacks where needed. Once you have completed this step, attach screen tone for backgrounds and clothing for a polished finish.

If you decide to use a felt-tip pen to fill in areas of black, be absolutely certain the density of the ink will not start to fade or dry out!

Add large patches of screen tone to the artwork and then trim off detailed areas as needed.

Overlapping panel lines

Overlapping lines

Make sure you clean up any lines extending into speech balloons as well, ok?

Mensofude

Smudge

Splotch where black ink fell

Mistake

6

Correcting Using White

Use white poster paint, etc. to correct mistakes. Be especially careful about lines extending outside of the panel or inside speech balloons.

7

Completed Draft

Once you've finished, look over your artwork carefully yet again.

Done!

Nopel Nopel Nopel

Professional artists always do step 6 twice.

You'd be surprised how much gets overlooked.

Pencils and Pens

Pencil in the under drawing.

The more you practice with a pencil, the more proficient at drawing you will become. However, *manga* is ultimately rendered with a pen. How much experience you have drawing with a pencil does not necessarily translate to drawing well with a pen. Consequently, the under drawings should be just a rough sketch.

Inking

Do a crude sketch in pencil directly onto the art paper.

Storyboard

Add in roughly the speech balloons with dialogue and the general layout of the panels.

Drawing with Pencils and Pens

Keep practicing until you become comfortable with a pen!

To become accustomed to using a pen, all you can do is practice. Keep until you feel comfortable with it. Practice. Practice. Practice. Doodling in pen is also recommended. Once you become used to it, you will find it is faster than drawing in pencil, and what's more, you will be able to render at will thin as well as thick lines with only one drawing implement. Now, that's what I call useful.

If you find working with a dip or technical pen absolutely impossible, start by practicing with a felt-tip pen.

Inking

Add special effects and screen tone to complete the artwork. Do not forget to do touchups using white poster paint, etc.

Adding Finishing Touches

Use drafting film ink, ink for certificates and official documents, or India ink to ink the lines of the drawing. Rotring and other brands are recommended.

Pens

Become familiar with the different characteristics of each type of pen nib.

There are many different kinds of dip pens. Experiment with different nibs and select the types you prefer to use.

Experiment with using a variety of nibs to draw different types of strokes.

Use pencil to do the under drawing and then ink over it. The thicknesses in lines produced by the two are different, so you will not be able to draw in the same manner.

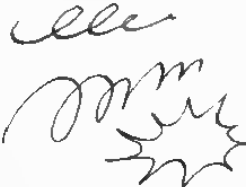

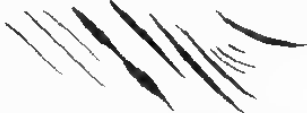

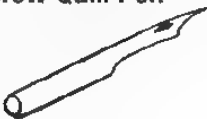

Types of Pen Nibs and Their Uses

Take care of your pen nibs

To use a pen, first insert the pen nib into the holder. It should be noted that the crow quill pen nib has its own holder and cannot be used with the same penholder as the other nibs.

Everyone has their own preferences, so play around with the different nibs to find the one with which you feel the most comfortable.

Pen Nibs	Characteristics	
G-Pen 	<p>Great for drawing curves</p>  <p>Allows for easy line modulation</p>  <p>Excellent for figures</p> 	
Crow Quill Pen 	<p>Great for straight lines</p>  <p>Irises and pupils</p>  <p>Backgrounds with lots of minute detail</p>  <p>Stipple dots</p>	
Spoon Pen 	<p>While the lines produced by the spoon pen are not exceptionally fine, the point does not wear down and is well-suited for figures and backgrounds.</p>  <p>A terrific pen for those who bear down on the nib</p>  <p>This pen can draw anything.</p> 	
School Pen <p>Does not allow for much line modulation.</p> 	Calligraphy Pen <p>This pen is superb for lettering.</p> 	Rotring pen <p>This pen is great for lettering and large dots.</p> 

For those who find it absolutely impossible to draw with a dip pen, start by practicing with a felt-tip. Once you become proficient, then take a crack at dip pens.

Black and White

Balance the tones of your artwork.

Here, we discuss the application of solid black. Skillful use of blacks will help the artwork appear well-balanced. Use *sumi* to fill in areas of solid black while inking. Areas of black can be filled in using a brush, a felt-tip pen, or a brush pen.

Use a *mensofude* or a small *hakkei* (an ultra-fine *mensofude*) of around 0.6 to 1 cm (0.24 to 0.4 inch).

- ① Sketch the under drawing in pencil.
- ② Ink over the under drawing.
- ③ With an eraser, remove all pencil markings.
- ④ Use a brush or other implement to fill in black areas with *sumi*. For detailed areas, use a dip or felt-tip pen, first outlining the area and then filling it.

Practice with Black

Applying Solid Black and White (Correcting Errors)

To finish, use white to clean up errors.

Use white poster paint or correction fluid to clean up areas where lines extend beyond their boundaries or cross and smudges. White can also be used to create stars, snow, and other patterns or open letters (outline typeface).

If you are going to use paint, opt for a nontransparent watercolor.

A yogurt container or jar is great for cleaning brushes.

To prevent the brushes from becoming damaged, be sure to clean them properly after each use.

Poster paints tend to dry up if left for long periods without stirring. If this happens, add a bit of purified water and mix. This will also prevent mold.

Clean up all mistakes and lines extending outside of their boundaries resulting from when you inked the artwork.

Black and White

Effects Using Black

When the background or figures are left white, the work quality appears slack. Those who are just starting to create *manga* should render their artwork by filling in areas with basic solid black.

Oh dearie me!

Surprise/Fear

Night scenes can conversely be rendered with the subject in black instead of the background.

Emphasis

Creating Effects Using Black and White

Effects Using White

Stars

Snow

White Lines

Thin lines, grass, hair, tree branches, etc.

Stipple Dots

Night Scene

The Original Copy

What size should the paper used for the original copy be?

The size of copy to be published in magazines is preset, and the artist is required to format the original copy according to the magazine specifications. However, *manga* art paper, specifically for use in creating *manga* has recently appeared on the market. Try to position all of your primary artwork inside the innermost margin appearing on the *manga* art paper.

For those who are just beginning, keep your artwork within the innermost margin on the *manga* art paper, and you should have no worries.

Standard Publication Formatting: B4-sized Paper

Standard Publication Formatting: B4-sized Paper

For practice, take a sheet of used *manga* art paper that otherwise would be intended for the trashcan. Cut out the center to make a template. Use this template to draw the inner margin in pencil on high quality art paper. The template will make drawing the margin lines a snap!

Manga art paper with the center cut out

I've been margined!

Inner and Outer Margins

The Inner Margin

This is the innermost margin on the original copy. Panels are distributed inside this margin. Use a regular lead or a non-photo blue pencil to mark down panel lines.

Outer Margin 1 — *Shiagari* (Gripper Margin)

This is the margin beyond which absolutely nothing is printed. Anything below or above center will be printed up to this line. Conversely, only marks to the right or to the left up to the *tachikiri* line of this margin will be printed (according to where the gutter will lie). If you are drawing *manga* in a formal formatting for the first time, have lines extend beyond only the top and bottom of this margin.

Outer Margin 2 — *Tachikiri* (Trimming Margin or the "Bleed")

This is where the page of a magazine or book is cut off. Extend lines beyond the margins up to this line.

If you fail to draw your artwork according to the specifications, this is what will happen.

Good

Tachikiri
(Trimming
Margin/Bleed)
Outer

Inner
Margin

Not good

See how well
that came out?

What a mess!

Margins and Panels

Proper delineation of margin and panel lines is extremely important.

Delineation of margin and panel lines seems at first glance to be rather bland work. However, if these lines are not drawn properly, the artwork will appear slipshod overall. Use a pen and a straightedge to draw the lines, taking care with the straightedge's placement so that clean, well-positioned lines will result.

Straightedge

Be sure to use a straightedge that is longer than the height of the original copy. If the copy is to be submitted for standard publication, then the straightedge must be between 45 and 60 cm in length (17 1/2" to 23 2/5"), while a straightedge for artwork following *doujinshi* format specifications should be 30 cm (11 7/10") in length or longer.

Drawing Margin and Panel Lines

First, draw the horizontal lines.

Corners tend to be tricky. Rotate the artwork 90° and draw the vertical lines. Go slowly and try to keep the lines as even as possible.

Those who are just starting out may use a felt-tip pen instead.

Line Drawing Tools

Felt-Tip Pen: For Beginners

Characteristics

Erasable to some extent and economical. Select a pen with around a 0.8 mm point.

Care

Keep the cap securely on the pen when not in use.

Ruling Pen: For Intermediate Artists

Characteristics

This allows you to draw a line of a certain thickness. It also allows you to modulate the line's width.

Care

For those that swivel, swing the backside around fully and wipe the inside off with a tissue.

Delineating Margin and Panel Lines and Using the Appropriate Tools

How to keep the ink from bleeding under the straightedge

If you just set a straightedge directly on the paper and then draw a line, the ink will bleed under the straightedge. Always use a straightedge that is beveled. Ensure that there is always a gap between the paper and the side where the pen touches the straightedge.

The straightedge should be positioned with the beveling down.

The straightedge should be positioned with the beveling up.

Clean up any lines extending outside of the panel borders and smudges using white poster paint, etc.

Clean up lines marked by the →

Draw panel lines at a uniform thickness, regardless of the panel's size.

Good

Not good

Take care that lines drawn at a fixed thickness do not fade or dry out.

Dip Pens: For Advanced Artists

Characteristics

Simply adjusting the pressure applied by the hand can modulate the line's thickness. Dip pens are difficult to use without experience.

Care

Wet the nib using water or ink and wipe with a tissue.

Technical Pens: For Seasoned Artists

Characteristics

Not only are these pens expensive, but their upkeep is difficult as well. They can be used only with specialty inks.

Care

Wipe with a tissue. If the ink clots inside the pen, clean it with specialized cleaning fluid.

Creating a Color Copy: Materials

So, you want to produce a color copy?

Use water-resistant ink to render lines. Use of water-based ink with watercolor paints will cause any pen-drawn line to bleed. The same holds true for white paints, etc. used to make corrections.

Needless to say, oil-based pigments cannot be used on art paper or oil stains will result.

Points of Caution When Using a Brush to Add Color

Always use as fine (small) a brush as possible and apply the pigments carefully. If you intend to use the same brush to apply various pigments, be sure to wash the brush in between colors. Use a small brush for tiny details. Use a flat or large brush for backgrounds.

Points of Caution When Using a Marker to Add Color

Always start with light colors and gradually progress to darker ones.

Points of Caution When Using a Color Tone to Add Color

Use color tone for the background and large patches of color. Color tone is expensive, so a viable, economical alternative is to use colored paper in the desired shade in place of the color tone.

Painting Backgrounds on Large Format Paper

In such cases, either draw on illustration board or size the paper.

1 Under Drawing (Sketch)

Pencil the under drawing.

2 Tracing

Copy the under drawing (sketch) to the paper to be used for the original copy. Avoid using an eraser as much as possible, as it will cause the paper to pill and become coarse.

3 Inking

Use a water-resistant black pen to ink.

4 Adding Color

Add colors using the materials you prefer. Color tone makes finishing the background a breeze.

Wet the back of the paper.

Backside of the Original Copy

Wet the entire back.

Attach the moistened paper to a thick board.

Draw the artwork here.

Masking refers to covering non-target areas of the artwork.

Masking areas you do not want to color makes the task of adding color easier.

Masking is an important technique for achieving cleanly colored artwork.

1 Masking

Use transparent film, tracing paper, or other material to mask areas where the color is not desired. Any material may be used, provided the pigments will not leak through.

Masking Film

Flat brushes are great for covering large areas

Masking Film

Use caution to prevent the color copy from becoming soiled!

Place a protective covering of tracing paper or acetate film on the finished color copy. Take extreme care to ensure the color copy stays pristine.

2 Coloring

Use nonhesitant strokes. This will prevent unevenness. If a hazy, bleeding effect is desired, apply water to the brush.

Masking Film

3

Remove the Masking.

Use a dryer to heat the masking film while removing it. The film will remove easily this way, plus it will prevent the original copy from becoming damaged.

4 Add Finishing Touches.

Add in any remaining details and voilà!

What is tracing?

Tracing is performed when an original artwork is made transparent and copied to another paper. Once you master this technique, you will find it easy to copy any line drawn.

If the target artwork is not detailed, lay it over a window or TV screen to make it transparent and trace.

Trace artwork when you intend to transfer a sketch to the paper for the original copy or to copy an image in reverse. There are also artists who trace when inking.

How to Trace

Use tracing paper and a light table to trace. You could make your own light table.

Avoid working for long periods with the light table: it can be damaging to the eyes.

Various types of tracing paper available on the market.

Using tracing paper is an economical option. First, trace the target artwork onto the tracing paper. Once finished, flip the tracing paper over and rub pencil around the drawing. Next, place the tracing paper right side up on the art paper to be used for the original copy. Trace over the lines of the artwork on the tracing paper. This should cause the target artwork to be transferred to the art paper.

A light table can be made simply by placing a fluorescent light underneath a glass table.

If you do not have access to a glass table, make your own by stacking 2 piles of books and laying a plate of glass over them.

Chapter 2

Creating *Manga*

Manga comes in a multitude of forms, ranging from single-paneled work to full-blown story-based *manga*. In this chapter, *manga* has been broken down into several types and discussed one by one.

Creating 4-Paneled *Manga*

Establishing the layout of 4-paneled *manga*.

The specifications for 4-paneled *manga* vary from magazine to magazine. Let's take a look at how 4-paneled *manga* books are actually laid out.

Whether or not a gutter (gap) is left between panels is your choice. Use somewhere between 0 to 2 mm as a guideline.

Page 1 (the "Splash Page") of 4-paneled *Manga* Distributed Vertically

In the figure below, the title is positioned to the right, while the 4 panels are placed to the left.

Page 2 and Onward

Two vertical columns of 4 panels each are positioned on the page.

The Splash Page of 4-paneled *Manga* Distributed Horizontally

The title appears at the top of the page, and the 4 panels are positioned underneath in a side-by-side format.

Word to the Wise!

When submitting the artwork to a magazine for publication, always follow the magazine's specifications.

Start by trying to create your own 4-paneled *manga*.

4-paneled *manga* allows the reader a sense of a story's logical development. Let's start by seeing how this is constructed.

Beginning

This establishes who the main characters are, where they are, and who is with them.

Development

Here, the story begins to progress toward a specific goal.

Climax

Here, an incident occurs causing upheaval in the story. This is the highlight of the story. At this point, characters engage in actions diverging from those they had assumed up to then.

Conclusion

This shows what follows the climax. For comedy, it is the punch line.

The Organization of 4-paneled *Manga*

Creating Short *Manga*

Start first with short *manga* and expand as you gain experience.

It is rather difficult to produce 32 pages of *manga* when you are just starting out. Instead, begin slowly but surely by producing short *manga*, building on your story development and panel design skills.

★Story (Dramatic) *Manga*

For our purposes, we will regard "story *manga*" as basically a storyline with a logical development. Determining roughly how the story will develop on each page will greatly help you complete the work.

Planning a Plot

When you are at a loss for how to devise an interesting plot, consider the questions "When?" "Where?" "What?" and "Why?" developing the story as you answer each. If you repeat this about 4 to 5 times, then you probably will have filled about 16 pages of *manga*.

★Comedy *Manga*

The key to good comedy *manga* is how to design it to amuse as many readers as possible. Go for at least one laugh per page.

Sample Setting	When?	Where?	Who?	To/with whom?	Does what?	What are the results?
1	After school	At school	The hero	His love interest	Confessed his true feelings.	Unbeknownst to the hero, standing behind the () is her brother, and...
2	Anytime	A backyard	A dog	Its owner	Digs up money hidden in the yard.	The dog becomes brilliant.
3	Midnight	The sky	A man is gazing upward.		A spaceship approaches.	The man is struck with fear.

Determine the design of the panels, dialogue, and roughly how the characters will be positioned. Plan the rough layout before beginning a formal copy.

The page layout progresses as follows:

Top to bottom

A cartoon illustration of a young boy with dark, spiky hair and a wide, happy smile. He is wearing a light-colored, short-sleeved shirt. He is pointing his right index finger towards the left. In his left hand, he holds a rectangular piece of paper. On the paper, the text "Use B5 copier paper" is written in a simple, sans-serif font. The background is plain white.[illegible]

Make Your Own 4-Paged Manga 1

The splash page

The splash page (page 1) marks the beginning of the story. Present in a clear manner the initial setting, establishing when and where the story takes place.

Beginning

The first panel offers a clear introduction of the location and the characters, and start to the plot.

Page 2

Next comes the development part of the story, which gives direction to the overall storyline. Avoid adding too much dialogue at this section.

Development

Take advantage of the page layout and add a huge panel extending all the way to the trimming margin. Prevent your panel layout from becoming monotonous.

Make Your Own 4-Paged Manga 2

Page 3

The story's climax occurs here. Have the story take a turn that will thrill your readers. It is also acceptable for you to develop your story using the climax as the springboard.

Climax

Normally, in situations like this, the child returns to consult Mom and Dad one more time, only to find out that they were themselves feeding the puppy in secret, thus causing the story to take a turn.

Page 4

This is the where the final punch is delivered. Try to conclude the story with an impressive ending.

Conclusion

Despite that Mom and Dad finally give their permission to keep the puppy, she runs away.

Creating Full-Length Manga 1

How to produce full-length Manga

You will find creating full-length *manga* that is longer than 16 pages is a simple task if you consider beforehand what sort of scene you would most like to draw for the climax. Then the lead character(s) and the place and time of the action (beginning) should all fall naturally into place, as well as the conclusion. All that remains is for you to somehow connect the climax to the beginning, which of course is the story's development. If you can make the development interesting, then the resulting product will also be interesting. For *manga* that is 32 pages or longer, add a minor climax every 5 to 6 pages and add a major climax somewhere in the latter half of the story.

8-paged Manga

16-paged Manga

Examining at a story's structure page-by-page

Breaking down the story's components, we see that the most number of pages are spent on the story's development, followed by the introduction and the climax. Make sure you draw out the climax! Keep the ending short and sweet.

Designing the page layout for 8-paged *manga*

Distinguish between the single, splash page and the spread pages. Scene changes will occur several times during the course of the *manga*, so provide the reader with a clear explanation each time. Since the format is short, keep the plot simple. Limit the beginning and conclusion to 1 page each.

Remember to include speech balloons.

Beginning

- ① Splash page
A Girl and A Boy

Designing the page layout for 8-paged *manga*

A House

A Park

Development

- ③ A glass window breaks.

Development

- ② 2 pals having fun practicing batting

Development

- ⑤ The friends blame each other and begin to fight.

Development

- ④ An angry person emerges, and the 2 friends hide.

Overgrown grass

Climax

- ⑦ The 2 are scolded.

Development

- ⑥ The noise created by the 2 fighting gives away their hiding place.

Prevent the artwork from becoming too cluttered.

Nothing should be drawn in the gutter, indicated in grey.

Conclusion

- ⑧ The 2 realize that they were wrong to fight and make up.

On the way home

Creating Full-Length *Manga* 2

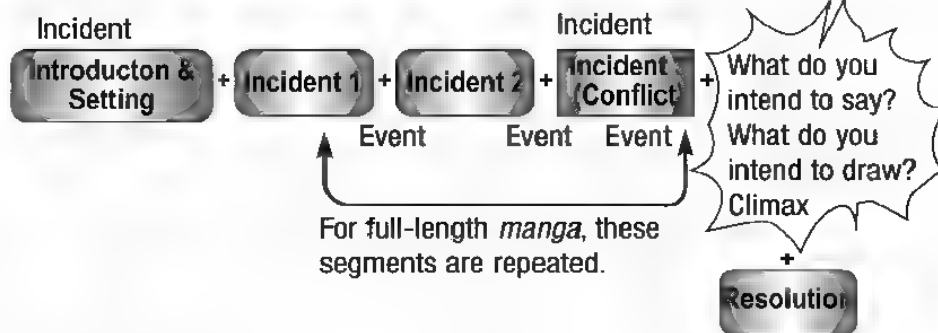

Arrive at a theme

Incorporate a number of minor incidences and occurrences to progress your story. Take care to maintain an integrated thread connected them to prevent your unifying theme from becoming disjointed.

Establish the layout for the full-length *manga*

If you attempt producing an original copy of full-length *manga* from beginning to end, you may find that you have become dissatisfied midway through the project and are not sure how to rectify the problem. If you do find yourself in such a situation, write down an outline of the story's main contents. This constitutes the story's plot. Once you have summarized the plot, produce a general layout with lettering and rough sketches. Arrange the panels anyway you please. Allot a minimal amount of space to minor incidences of the story. Use extensive space for key parts and drag them out.

A Given Plot

Get into the habit of visiting the library and doing research.

A little research will give flavor to your story's theme.

Researching topics you find interesting is fun!

Ideas are not born in a vacuum.

Have a look through your sketchbook.

Do you sketch? If you never sketch, pick up a pencil and some paper and find something to draw?

Next, play an association game, linking various words.

Why did the apple fall? Because it was dropped by a witch. Why did the witch drop the apple?

There's gotta be an idea somewhere.

Shucks

16 pages is the most common length for story manga.

Those intending to create full-length manga should first practice by producing a relatively concise 16-page work. Select a single theme and include about 4 to 5 incidences to occur in the plot.

1 Unified Theme

This is where the author makes use of his or her skills in plot development.

This is where the author includes any key artwork.

Draw 2 pages per sheet of B4 paper.

An uncut, unpolished diamond is just a stone.

The most critical point is that you avoid rushing the story's progression.

Connecting Panels

Change the scene

Scene changes occur several times during the course of any *manga* that is 4 pages and longer. When changing scenes, add a panel that indicates the change to segue.

1

Changing Locations

Drawing a coffee cup creates a scene where a character is drinking coffee. Likewise, drawing a building, a landscape, a clock, etc. suggests a change has taken place in the location or the time.

2

Indicating the Passage of Time

Visual images allow you to describe the passage of time in a readily understandable manner.

The image of a wilting flower suggests the passage of the amount of time taken by the flower to wilt.

Depicting crows cawing against a dim background suggests nightfall.

Showing laundry hanging on the line to dry suggests clement weather.

Images of calendar pages suggest the passage of a long period of time.

Showing the sun rising over the hills suggests the beginning of a new day.

Showing a building together with the sky suggests simultaneously both the location and the time.

3

Modes of Representation Particular to *Manga*

Panel design can also suggest the passage of time.

We better hurry.

Swoosh

Splash

Alternate images of the ocean and people to suggest 2 actions occurring simultaneously.

Splitting panels may also suggest the passage of time.

Use panel design to indicate transitions and changes. This panel design suggests all of these incidences are occurring at the same time.

The further down the eye travels, the more time has passed, indicating that the character is absorbed in thought.

The Trimming Margin/Bleed

Exploit the trimming margin when creating your *manga*.

The original copy may be drawn with lines and marks extending beyond the inner margin up to the *tachikiri* (trimming margin) where all printing ends.

Given consideration to book and magazine binding when intending to exploit the trimming margin and add large images.

Be familiar with bookbinding: points of caution when dealing with the trimming margin.

Any marks or drawing extending into the gutter will be difficult to see once the book is bound. Consequently, not drawing in the gutter is recommended.

Artwork may extend into this margin.

Single Front/Title Page vs. 2-Page Spread

When the book begins on an odd page number, it starts with a single splash page. When the book begins on an even page, it starts with a 2-page spread.

Single Front/Title Page

This is the most common format.

Following this page is a 2-page spread.

2-Page Spread

When the story begins on an even page, then it starts with a 2-page spread. In such cases, the splash page may carry over to the next page. (See p. 51)

With vertical script, the book opens to the left.

On odd pages, the trimming margin on the fore-edge falls on the left side.

With horizontal script, the book opens to the right.

On even pages, the trimming margin on the fore-edge falls on the right side.

Attention

Make a sincere effort to ensure that anything important, such as a character's face or lettering, remains within the inner margin.

Only speech balloons may extend beyond the margin.

When drawing large-format artwork expanding over a 2-page spread, I recommend drawing both pages on a single large sheet of paper. If you intend on drawing the 2 pages separately, give proper consideration to where the gutter will lie.

Developing Characters

Develop characters appropriate to *manga*.

In addition to an interesting story, *manga* also requires colorful characters to make it even more appealing. Give the characters appearing in your story well-developed personalities.

You could use an old, time-honored character.

A beautiful, yet tough mother

The cute girl-next-door looking eager to do a good deed.

The family cat

In the case of comedy *manga*, be bold when rendering the characters' facial expressions and movements.

① Personality

Habits, interests, special abilities, faults

② Idiosyncrasies

Weaknesses, likes and dislikes

③ Physical Type

Large, small, plump, thin, curvaceous, brawny

④ Style

Clothes, eyeglass frame design

⑤ Background

Age, gender, occupation, name, location of home

⑥ Relationships

Family makeup, familial circumstances, friends, presence of a love interest, whether or not the character is a momma's boy, etc.

Jago (Cat)

This cat is as dirty as a garbage can. Despite being tiny and afraid of his own shadow, this kitty does not trust people and is a bit nippy. Consequently, this kitty is not the slightest bit cute when he comes to the kitchen, looking to get fed. Yet, for some reason, we still feel sympathetic toward the grump.

Sample Characters

The Lead Character

This should be either a personality-type that appeals to you or who has mass appeal.

Here we have a gumshoe/robot team: Detective Kawai Kawai and her state-of-the-art robot, Ryusei ("Meteor"). She is desperate for romance and tends to fall for handsome rogues.

While following Ryusei's tracks, Detective Kawai finds her heart inadvertently stolen.

Sunerarian (see pp. 40 to 43) is a 6th grader with peevish propensities and who fails to listen to others once he's in a snit. He's a big boy and tends to throw his weight around. However, he is as gentle as a lamb toward smaller kids and girls.

Characters battling on the side of justice need a worthy adversary!

If this character were an animal, she would be a bat.

A nasty side

And a nice side

Plan carefully the background and the story and create meticulously developed characters.

Actual Characters [From *Omasena Yumin* (Literally "Precocious Yumin")]

Background:

Yumin is a little girl with extraordinary powers, born in a top secret ESP research institute. Yumin discovers love by reading books, which inspires her to escape from the institute. She then meets Kei, a high school student, and takes up residence in his apartment.

Story:

Yumin falls in love with Kei. Whenever an attractive girl approaches Kei, Yumin becomes jealous and either plays a trick or uses her powers in hopes of turning Kei's head in her direction. Yet, she never succeeds in her attempts, and ultimately, Kei just treats her like a kid. In also attempts to attract Kei by inviting him on dates, but her endeavors always end in failure. In return, Kei looks after her with brotherly affection.

Kei

- A high school student living in his own apartment
- Is, much to his chagrin, the object of Yumin's romantic affection
- Feels brotherly tenderness toward Yumin
- Somehow has become caught up in Yumin's antics
- Is friendly and compassionate
- Despite his good nature, Kei can be somewhat blind to the obvious

Yumin

- A 7-year old girl gifted with extraordinary powers who escaped from an ESP research institute
- Has fallen desperately in crush with the gentle Kei
- Will do anything to get Kei to look her way
- Is cheerful but constantly demands attention
- Is precocious, very nosy, and hates to be treated like a baby
- Is extremely curious
- Is enamored with love and dreaming

The more detailed a character's background, the more depth that character will have. In fact, devising background details that might not necessarily be referenced in the *manga* itself could potentially lead toward new, exciting ideas.

Chapter 3

Drawing People and Animals

Movement and facial expressions are critical to *manga*. The same holds true whether the protagonist is a human or an animal. Practice drawing again and again and try to arrive at your own *manga* style.

Drawing People

Faces are key to *manga*!

The way a character's face is rendered is important even to story *manga*. Once you become proficient at drawing a variety of facial expressions, your *manga* will become that much more interesting.

Here are the basics of a face seen from a frontal view.

Oblong Face

Oval Face

This is a basic face.

Round Face

Faces in profile

The position of the eyes and nose remain the same even when the face is in profile. The face changes depending on the curves of the eyebrow, eye, and nose.

Frontal vs. Profile View

Frontal

Profile

Adjust the shapes of the eye, nose, and eyebrow.

Experiment with shifting the face

The eyes turn down when the face is looking downward and turn up when the face is looking upward. Refer to how faces are drawn in other artists' *manga* and then try drawing yourself.

Using Eggs to Study the Face

Once you have become competent in drawing, you will become capable of drawing from any imaginable angle.

Use paper to form the nose.

Draw lines, eyes, and a nose on an egg and study how the positions of the eyes and nose change at different angles.

The Appearance of Different Facial Features at Various Angles

When viewed from a low angle, the eyes, nose, and mouth curve upward, the top of the head appears smaller, and the chin, larger.

When viewed from a high angle, the eyes, nose, and mouth curve downward, the top of the head appears larger, and the chin, more pointed.

The various facial features change in appearance depending on the angle. For that reason, I recommend checking out faces in sketches by other artists and books on the cinema.

Drawing Faces 1

Drawing faces in reverse

If you are experiencing difficulties in drawing faces in reverse, try tracing from another sheet of paper. If you do not own a light table, use a glass window or tracing paper instead.

Use tracing paper to copy the drawing underneath.

Flip the tracing over and rub. The tracing will transfer faintly to the sheet beneath.

Various facial features

There are many ways to draw each facial feature.

Eyebrows

Eyes

Noses

Mouths

Study various artistic styles.

There are even trends in how the face is rendered, so look at many examples of how other artists have drawn the face and hair, and try to come up with your own personal style.

Carefully consider the direction of the light source when giving hair a glossy shine.

The eyes' position shifts according to the character's age

The face takes on an infantile appearance when the eyes are lower than center. As the eyes rise, the face takes on a more mature look.

Drawing Faces 2

Various facial expressions

Facial expressions are extremely important. A multitude of facial expressions can be represented through manipulation of the shapes of the eyebrows, eyes, and mouth. In particular, facial expressions tend to be exaggerated and obvious in comedy *manga*, so use them as reference.

"Tee hee!"

"Ha ha!"

"Uwaa ha ha ha haaa!"

"Hmph!"

"Grrr!"

"Why you &%@&*\$^!"

"Huh?"

"Wha?"

"Yipes!"

Aaaah!

Panic!

Sniffle, sniffle

Sob

"Waaaah!"

Glance

"I just know it won't work out."

Feeling dizzy

Being serious

"Snarl!"

"Yum!"

Munch! Munch!

"Harrumph!"

"Is it hopeless?"

"Heh heh heh!"

Sleepy

"Mwah!"

Facial muscles and expression

Facial muscles affect the appearance of expressions.

Laughing

Frightened

Surprised

Angry

Sad

Use the whole body to demonstrate emotion.

When depicting strong emotions, use the hands and feet exaggerating the display.

Check out other artists' work and get as much as possible of your own practice drawing.

Drawing the Torso, Arms, Hands, and Legs 1

Drawing the torso, arms, and legs

Now let's take a look at the arms and legs and how they should be rendered.

The mirror is an invaluable resource!

Leonardo da Vinci's *Vitruvian Man*

Whirl, whirl

The Hands

The movements of the arm, elbow, and wrist

The Legs

The movements of the thigh, knee, and ankle

Scurrying

Un, deux, trois

Maya Princess Kaya

The composition of the torso

The torso can be envisioned as being composed of 2 cups.

Side View

The Body's Proportions

Being familiar with the body's composition will facilitate your ability to produce detailed and accurate drawings.

Be aware of the body's makeup.

The body moves at the joints.

The upper body raises and lowers.

Pelvis

And, it rotates left and right.

The torso moves along the spine.

Drawing the Torso, Arms, Hands, and Legs 2

Drawing the arm

The arm is basically a cylinder (the shape of an elongated cup), divided into 2 sections attached by a joint.

Drawing the hand

Those who are right-handed should look at their left hand while drawing (and vice versa). Drawing the opposite hand is an easy task if either a drawing of the left hand (or right, in the case of lefties) is traced or a mirror is used when drawing.

When a finger is pointed toward the picture plane, it appears shorter and thicker.

Carrying

Pointing

Gripping/Holding

Drawing the legs

Like the arms, the legs are also a near-cylindrical shape.

Try dressing the legs in pants!

The legs do not comprise straight up and down lines. Note the curves of the leg when drawing.

Note how creases are formed when wearing pants.

When the leg is extended toward the picture plane, it takes on a shortened appearance.

Drawing the toes

Take note of the ankle and the foot's arch.

Drawing the Full Figure 1

Adjust the form of the figures according to the category of *manga*.

The body to head ratio (i.e. size of the head) changes according to whether the *manga* is comedy or story-based. First, try drawing the body to head ratio you prefer.

The Adult Figure (About 8 Heads)

The wrist is drawn about level with the ankle.

The Human Skeleton

The body's structure

Our bodies have joints from which we bend. Try drawing the human figure while envisioning the body as a series of elongated cups linked at these joints.

Our bodies bend at the joints, allowing us to move. Try drawing the human figure at a body to head ratio that you prefer. Start with easy poses.

Dress your figure in clothes.

In comedy *manga*, the body to head ratio may even be 3:1!

Drawing the Full Figure 2

Poses with the limbs directed toward the picture plane are difficult to render, so practice them repeatedly.

The neck becomes obscured when the head leans forward.

Comedy Manga

Exaggerate gestures and movements!

Sketch yourself in the mirror and try to become proficient at drawing any kind of pose imaginable. Another great idea is to have your friends pose for you as models.

Rendering motion

It is particularly difficult to capture movements in a 2-dimensional format. Practice drawing a wide variety of movements.

The far part of the leg appears smaller.

Foreshortening is used in *manga* to make objects close to the picture plane larger.

For reference, have a look through books related to sports and the cinema, and check out other artists' sketches.

Distinguishing Between Male and Female Figures

Be aware of the differences between male and female figures and maintain a distinction when drawing.

The contours of a man and woman differ according to the way the muscles attach. Maintain a distinction when drawing and give your characters a bit of individuality.

The Backbone

Women have an arc in their backs.

Breasts and Hips

Attractive breasts are drawn as a conical shape and equidistant between the 2 papilla (nipples) and from the shoulders to the papilla. Women's hips are drawn rounded.

Man

Broad shoulders

Relatively straight at the waist

Few curves

High center of gravity

Woman

Shoulders are narrow and slope.

Slender waist

The chest and hips are rounded.

Low center of gravity

Pay careful attention to the body's muscles.

In *manga*, the features of the muscles and body overall are exaggerated to make what is being represented obvious. Be sure to emphasize musculature in male characters and the chest and hips in female.

The Female Body
Both men and women have muscles in the same location, but they tend not to be as prominent in women.

Distinguishing Characters of Various Ages

The body changes with age.

The proportions in the face and body change as one ages. Be aware of these changes and make clear distinctions when you draw.

Front

Side

The Face

Comedy Manga

For comedy *manga*, draw characters more with exaggerated features indicative of their age rather than proportions.

Shonen and Shoujo Manga

The male and female characters are typically drawn younger than that of their supposed age.

Dress your characters in clothing adjusted to fit the body's proportions.

Drawing Infants

Pointers in drawing infants

Infant heads should be drawn large with the eyes slightly low of center and with the forehead protruding and cheeks plump. The chin should not jut out.

Infants have few hairs.

Infants have a narrow range of expression.

Pointers in drawing toddlers

Toddlers should be drawn with more hair than infants and slightly longer necks. The eyes should be slightly low of center.

Drawing Children

Drawing children between 6 and 11 years

Use straight lines in areas other than the face. Exaggerate movements and gestures to give the sense of a spunky, lively child.

When rendering a character in action, first draw a stick figure and then flesh out the figure.

Drawing children between 12 and 15 years

Children at this age have transformed into young adults. Take care in maintaining a distinction between the girls and boys of this age group.

Boys

The muscles have not yet fully developed, so even when standing up straight, the character's neck and chest should not appear as robust as that of a mature man. The cheeks should still be full and plump.

Girls

Her figure has not yet become curvaceous: the chest has just begun to fill out and the waist has not grown narrow. Other than that, she should be drawn similarly to a mature woman.

Drawing Middle-Aged Characters

Draw heavysset figures

Middle-aged adults tend to put on weight, compared with when they were young. In particular, drawing the stomach jutting out should help your character take on a middle-aged appearance.

The stomach should stick out somewhat even on thin characters.

Wrinkles appear between the eyebrows and around the mouth.

The hair gradually thins. Try giving some of your characters mustaches and/or beards.

Necks appear shorter on thickset people.

Middle-aged Women

To create a middle-aged woman, simply add breasts to a middle-aged male figure. The figure should be plump around the waist.

Drawing Elderly Characters

Drawing the elderly

Aged characters tend to produce more wrinkles, as they grow older. Draw your older characters with little hair.

The back should be more hunched compared with that of younger characters. Draw the characters hunched.

Vertebral Column

Elderly Figure

Youthful Figure

The back is hunched as if searching for something that dropped on the ground.

Old people tend to move more slowly than the young. Give each of these characteristics to your character, but also add your own style.

Have your character lean on a cane.

The legs and back are bent.

The breasts hang.

Drawing Clothing

Draw clothing and creases convincingly

Once you have produced your adeptly drawn figures, garb them in the clothing of your choice. Also, check out what designs appear on TV and in fashion magazines so that you may incorporate the latest styles in your work.

Adding creases to the clothing article enhances its sense of authenticity.

Adding a Sheen to Clothing

Give a luster to leather garments.

Light Source

Typical Clothing Creases

Check out the styles used in fashion magazines and films.

This drawing was based on an image of Gregory Peck from Roman Holiday.

A Loosely Fitted Blouse

Check carefully where creases form in clothing.

Raise your arms and legs.

Raise your arm.

A dress with lots of tucks

Skirt

When drawing creases, carefully note how clothing droops and sags around elbows, knees, and on socks.

Arm

Knees

Sock

Trousers

Wearing a Hat

When putting a hat on a character, first draw the contours of the entire head.

Drawing Animals 1

Try drawing animals!

The best reference source for drawing animals is to look at their living counterparts. Those who have their own pets can use them as reference. Those without pets or those drawing animals not normally living in a house should use picture books for reference.

Cat

Dog

Using Circles and Triangles to Establish the Animal's General Features

Animals are structurally complex. Consequently, I recommend you first render the most general and salient features in a rough sketch using circles and other geometric shapes.

Lion

Hippopotamus

Distinguishing the Personalities of the Different Animals

Is the animal strong? Weak? Cute? Wily? Try to capture the personality traits of the animal in your artwork.

Mole

When storytelling, render animals realistically.

Mouse
Teeny and cute

Rabbit

Fox

A tubby raccoon fox

Lion

Bear

Monkey

Gorilla
Strong but gentle

Pig
amiable and clownish

Drawing Animals 2

Noting Animals' Movements

Have your animals move in a way that matches their characteristics. Give motion to your artwork.

Cow

Mooooo

Now Bessy, let's have some milk.

Horse

Dolphin

Dolphins are in the general shape of a fish.

Elephant

Whale

Dinosaur

Dragon

Yipes!
He's huge!

Imaginary Animals

When drawing imaginary or fantastic creatures, refer to fantasy *manga* or books to see how other artists have rendered them.

Drawing Birds

Sketch the head, body, and wings using geometric shapes and then add the details.

Parrot

Pigeon

Crow

Birds Flying

Larger birds tend to have smaller heads and larger wingspans.

Chicken

Owl

Bantam

Penguin

Drawing Animals 3

Drawing Birds for Advanced Learners

The wings and feet of a bird are complex. Illustrated books are a solid reference option.

Drawing Fish

Fish have their own distinctive physical appearance, featuring fins and other oddities. Study how fish appear when swimming by looking at illustrated books.

Turtle

Shark

Octopus

Animals' Movements

It is difficult to create artwork with motion, so check out a few videos and study how animals move using the pause button on your VCR. The pause function on DVD's offers clear still images.

When showing cheetahs and leopards run rapidly, draw them with both the front and hind legs moving in unison.

Horses run with legs alternating front and back. The horse's hoof corresponds to a fingernail or toenail on a human.

Adding Facial Expressions

Animals in *manga* are at times rendered exaggeratedly, with large heads and emotions expressed on their faces.

Occasionally in *manga* when giving a person or an animal expression, an artist will disregard the figure structure on the preliminary sketch and instead distort the character's features. In the case of comedy *manga*, the personality of the character or situation he is in is exaggerated by drawing the hands or mouth unnaturally large, making the figure look even more comical.

Rather than having a normal man fall, instead create an even more humorous scene, by making the character into a smug affluent gentleman, emphasizing his personality traits and attributes.

Chapter 4

Manga Techniques

Once you are able to produce backgrounds that tie well in with the contents of the story, the characters will stand out all the better. Strive to create special effects using solid blacks, special effect pen strokes, screen tone, and lettering.

Emphasis and Exaggeration

Use special effects to complement characters.

Accentuate characters by adding special effects created using simple lines or solid blacks.

Drawing Free Hand
Straight Lines

Once you have become competent at drawing freehand, use of the straightedge can be limited to the penciled under drawing.

Radiating lines like these look great, provided that they branch out from a designated central point.

Crosshatching

Wavy Lines

Use solid blacks to underscore fear or surprise. (For more information, see the discussion of black and white.)

Use screen tone to create special effects. (For more information, see the discussion of screen tone.)

Use special effects to emphasize scenes.

In story *manga*, which general features serious content, the artist does not commonly exaggerate or distort figures. Instead, the artist uses panel design and backgrounds to express moods and emotions.

Here, solid black was used for the background and lines were added for shading around the eyes.

This scene was rendered showing only a fist.

Here, emotion is expressed using radiating lines.

Types of Basic Pen and Pencil Strokes

There are various types of strokes to be made with the pen or pencil. Learn and use them.

Straight (Parallel) Lines

Radiating Lines

Lines for Breezing by

Curved Lines

Speed Lines

Stipple Dots

Vertical (Horizontal) Fading Lines

Nawa-Ami ("Cord Hatching")

Ichikake ("Single Hatching")

Crosshatching ("Nikake" or "Double Hatching")

Crosshatching ("Sankake" "Triple Hatching")

Crosshatching (Sankake)

Gradation Shading
(Hatching)

Gradation (Nawa-Ami)

Beta Flash (Burst effect incorporating solid black)

Lightning

Straight and Curved Lines

Draw clean straight (parallel) lines.

The key to straight lines for suggesting speed or creating a gloomy mood is to use a straightedge and draw the lines at equidistant intervals. Keep your hand relaxed and practice drawing repeatedly until you become able to produce them quickly. If you find using a straightedge too difficult, then practice drawing freehand.

Use a straightedge or triangle to draw fading lines.

Partway through the line, reduce the pressure applied to the line.

A straightedge or triangle can also be used to draw lines with clean, crisp ends.

Draw parallel lines using consistent pressure throughout.

Drawing Straight Lines

Bring down the triangle, each time adjusting it to match the first line drawn.

Hold this triangle down firmly.

Draw parallel lines one by one using triangles and a pencil.

Wipe the triangle frequently with a tissue.

The beveled side should always face downward to ensure a gap between the triangle and the paper.

Draw the line using a straightedge or a triangle and a pen.

Practice using the pen

Relax your hand and use a straightedge to draw lines with a consistent thickness. When you first start out, draw slowly. Once you become more accustomed, use fast strokes to draw the lines.

Use parallel line to create a gloomy mood.

Produce skillfully rendered curved lines

Use a French curve to produce curved lines used to show movement in figures and objects.

Large French curves with beveled edges are easier to use.

Use curved lines to create effects such as this.

Use a French curve to draw curved lines.

Curves suggesting a turning head

Draw the "turning" lines freehand.

Cups and more

A small French curve could also be used for drawing details.

Use an ellipse template for details.

Pointers in drawing well-rendered curved lines

Keep your hand relaxed and draw with a quick motion.

Relax... relax.

How to Draw Curves

The key to drawing curves is to keep your hand relaxed and to draw the line quickly. This will result in a fine line.

Relax your hand while drawing the line to lighten the weight of the line.

Beautiful lines require practice and effort. All you can do is draw, draw, draw.

You just have to get used to it.

I botched it up again!

Caution! Remember to wipe off your French curve frequently with a tissue!

Radiating Lines (Burst Effects)

Use radiating lines.

Try using radiating lines to a mood of surprise, to a panel stand out, or to give emphasis. If you find it impossible to use a pen, then use a straightedge to draw the lines on the under drawing (original sketch).

Various Radiating Lines

Radiating lines converge on a center point.

Pointers in drawing radiating lines

Mark down the center point and, using a straightedge, draw each line one by one. The trick is to keep your hand relaxed.

1

With a pencil, mark where the center point will lie.

2

Draw about 3 lines crossing through the center point.

3

Using the straightedge and the pen, draw the lines toward the center point.

Apply pressure at the beginning of the line.

Quickly and fluidly release the pressure applied.

Repeat.

Straightedge

How to Draw Radiating Lines

Sketch

Inking the Lines

Try placing a thumbtack at the center point.

Rest the straightedge up against the thumbtack. Once the angle becomes awkward, rotate the paper. Use white poster paint to cover up the hole left by the thumbtack.

Getting used to this technique requires nothing but practice.

Moderate radiating lines

When drawing radiating lines with a center point somewhere outside of the drawing, use additional sheets of paper and mark down where the center point will lie.

But, there aren't any straightedges this long.

In cases like this, you just gotta use your intuition.

Beta Flash

Creating *beta* flash

Beta flash is a burst effect used to create a mood of high tension or when a character is agitated. This effect is a snap to produce if you use a worn down G-pen or spoon pen.

Creating a *Beta* Flash Effect

1

Mark down the center point with a pencil.

2

Draw about 4 lines in pencil.

3

Draw lines heading toward the center point using a worn down G-pen or spoon pen.

Pointers in producing *beta* flash

First, apply pressure to the line and then release this pressure, causing the line to fade out. Each line should taper at the tip and should slightly overlap the adjacent line.

Drawing Tip 1 Drawing lines that taper-

1. Apply pressure at the beginning of the line.

Whoosh!

3. Draw the next line somewhat overlapping the preceding.

Drawing Tip 2

Place a thumbtack at the center point and rest the straightedge against the thumbtack. This will prevent the straightedge from slipping.

Once the angle becomes awkward, rotate the paper.

Use white poster paint to cover up the hole left by the thumbtack.

Various *beta* flash effects

Beta flash is highly versatile and can be used in lieu of thought balloons, etc. Again, this technique requires practice.

Parallel *Beta* Flash Effect

Jot down parallel lines in pencil and then add the *beta* flash effect.

This can be used in place of thought balloons.

Draw concentric ovals and fill in where appropriate with ink.

Lighting is used to suggest an unusually intense mood.

Hatching and Crosshatching 1

Use hatching and crosshatching!

If you are capable, hatching and crosshatching allow you to create backgrounds, vegetation, shadows, and many other elements. It will also allow you to give your artwork a sense of volume.

Hatching ranges from single hatching (*ichikake*) to quadruple hatching (*yonkake*).

Types of Hatching

There are multiples kinds of hatching, depending on the number of strokes and whether they come from a fixed or varied directions.

Hatching ("*Ichikake*" or "Single-Hatching")

Crosshatching ("*Nikake*" or "Double-hatching")

Crosshatching ("*Sankake*" or "Triple-hatching")

Crosshatching ("*Yonkake*" or "Quadruple-hatching")

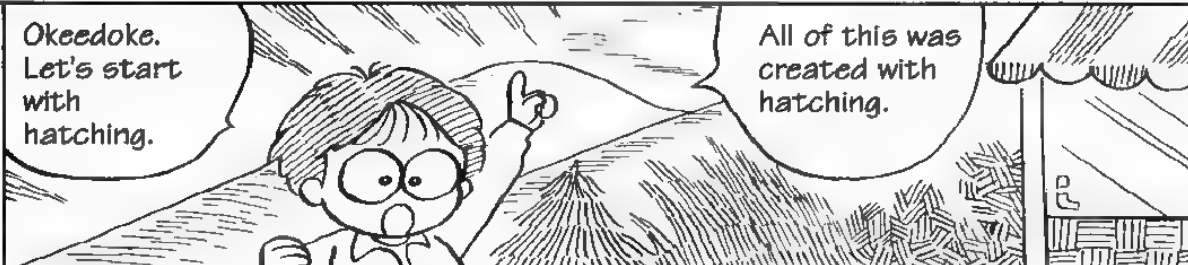

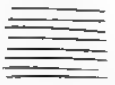

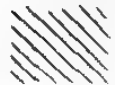

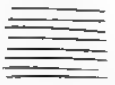

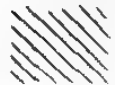

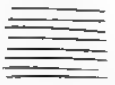

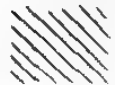

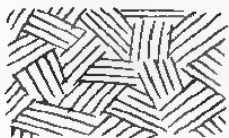

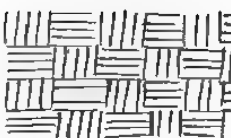

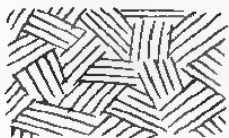

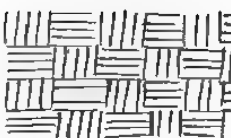

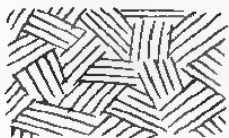

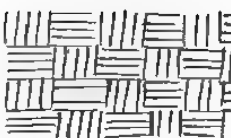

Points of Note in Crosshatching

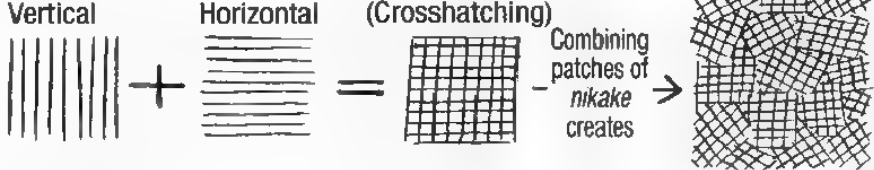

If the paper grows rough from scraping and catches on the pen, the lines will become thick.

Frequently wash off and wipe the pen nib.

Water may cause the pen nib to rust.

Ichikake (single-Hatching)												
Drawing Techniques	<p>The basic strokes (enlarged)</p> 	<p>Several parallel strokes are drawn at equal intervals.</p>	<p>Hatching Stroke Directions</p> <table><tr><td>Vertical Hatching</td><td>Horizontal Hatching</td><td>Diagonal Hatching</td><td>Diagonal Hatching</td></tr><tr><td></td><td></td><td></td><td></td></tr></table>		Vertical Hatching	Horizontal Hatching	Diagonal Hatching	Diagonal Hatching				
	Vertical Hatching	Horizontal Hatching	Diagonal Hatching	Diagonal Hatching								
												
<p>Combinations of the above create the effects shown below.</p>												
Hatching Effects	<table><tr><td>1</td><td>2</td><td>3</td><td>4</td></tr><tr><td></td><td></td><td></td><td></td></tr></table>				1	2	3	4				
	1	2	3	4								
												

Nikake (Double-hatching)			
Drawing Technique 1	<p>The basic strokes (enlarged)</p> <p>Vertical + Horizontal = Double-hatching (Crosshatching)</p> <p>Combining patches of nikake creates</p>  <p>The key to crosshatching is to use quick strokes and to keep your hand relaxed.</p>		
Drawing Technique 2	<p>The basic strokes (enlarged)</p> <p>Vertical + Horizontal = Double-hatching</p> 		

Hatching and Crosshatching 2

<p>Sankake (Triple-hatching)</p>	
<p>Drawing Technique 1</p>	<p>The basic strokes (enlarged)</p> <p>Vertical Horizontal Diagonal Triple-hatching (Crosshatching)</p>
<p>Drawing Technique 2</p>	<p>The basic strokes (enlarged)</p> <p>Vertical Net Pattern Triple-hatching</p>
<p>Yonkake (Quadruple-hatching)</p>	
<p>Drawing Technique 1</p>	<p>The basic strokes (enlarged)</p> <p>Vertical Horizontal Diagonal Diagonal Quadruple-hatching (Crosshatching)</p>
<p>Drawing Technique 2</p>	<p>The basic strokes (enlarged)</p> <p>Vertical Horizontal Diagonal Diagonal Quadruple-hatching</p>

Good

Not good

Use caution when overlapping sankake and yonkake.

Uses of hatching and crosshatching

Hatching and crosshatching can be used for any number of purposes, be it to render the ground, background, hair, etc.

Hatching used for the ground

Draw in whatever directions ya like, see?

Background

Crosshatching (nikake) in multiple directions.

Crosshatching (nikake) following a uniform direction.

The more you practice, the better you'll get.

Nikake

Ichikake

Yonkake

Sankake

To create a gloomy mood

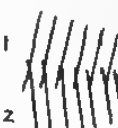

Rotating the paper will make it easier to draw.

Nawa-Ami ("Cord Hatching") 1

Creating *nawa-ami*

Like hatching and crosshatching, *nawa-ami* is used for shading and to create a sense of unease.

The Basic Strokes	Winding to the Right	Winding to the Left	Coil (Wound to the Left)
	<p>Strokes are shorter on the inner side of the cord.</p>  <p>Strokes are longer on the outer side of the cord.</p> <p>Long →</p>  <p>← Short</p>		
Drawing Techniques	<p>①</p>  <p>②</p>  <p>③</p>  <p>④</p>  <p>For steps ② and onward, gradually shift the angle started in ①.</p>	<p>①</p>  <p>②</p>  <p>③</p>  <p>④</p> 	<p>Continually shifting in the same direction eventually produces a circle.</p> <p>①</p>  <p>②</p>  <p>③</p>  <p>④</p>  <p>Rotate the cord into a full circle.</p> 

When drawing starts to become awkward, wind the cord in the opposite direction.

Creating Backgrounds with *Nawa-Ami*

1

Expand the cord, making it twist and wind as you desire.

2

Fill in the gaps between cords with more, making the separate cords indistinguishable from one another.

Crow Quill Pen

If you are able to crosshatch and to create *nawa-ami*, then *gomi-kake* ("dust" crosshatching) will give you no problem at all.

Gomi-Kake

Gomi-Kake Used in a Background

Gomi-kake is excellent if a creepy, eerie effect is desired. I strongly encourage those interested in producing ghostly, bizarre images to master this effect. Screen tone for regular crosshatching and *nawa-ami* already exists, so use combinations of the effects.

Gomi kake can also be used in backgrounds.

Nawa-Ami ("Cord Hatching") 2

Various Uses of Nawa-Ami

Whorl and Brier Patch Effects

Creating whorl and brier patch effects

Establish the shape desired in pencil, and then keeping your hand relaxed, pen the effect in freehand, using eerie strokes and shapes.

Brier Patch Effect with Solid Black Lines

Whorl/Brier Patch Effect

Brier Patch Effect

Modified Brier Patch Effect

Gradation

Use hatching, crosshatching, and *nawa-ami* (cord hatching) to add gradation.

Gradation consists of gradating the pattern value from dark to light with gradual, indistinct transitions. Once you become proficient at hatching, crosshatching, and *nawa-ami*, try your hand at gradation.

Artists use gradation when looking to create simple shadows or to make compositional elements indistinct, however desired.

Screen tone is an easier option for covering backgrounds or large areas of the artwork.

Hatching

Dark

Light

Dark

White

Nawa-Ami

Jot down the general target area in pencil and then add hatching or crosshatching.

Denser, smaller strokes were used toward the top, while larger, more open strokes were used toward the bottom.

The above was created using a combination of screen tone and crosshatching.

Hatching and Crosshatching

Black

Near Black

Quadruple-Hatching

Triple-Hatching

Double-Hatching

Single-Hatching

Nawa-Ami

The strokes are thick and drawn closely together.

Pressure has been released from the pen, and more space has been left between strokes.

Various Uses of Gradation

Background

Dusk

Shadows

Sheer Fabrics

Clothing

The Beauty of White and Black

Create backgrounds using solid black and white.

Use white on a solid black ground to create stars or open letters.

Drawing White Lines

Use a ruling pen or correction fluid in a pen-shaped applicator (correction pen) to draw the lines.

Artists accustomed to using a brush may opt for a brush and glass rod combination, keeping the brush parallel to the glass rod.

Straightedge with a Groove

Glass Rod

The ball end is placed in the groove.

Various Backgrounds

Ensure that the blacks and whites in your composition are well balanced.

Solid Blacks

Use black in shadows and backgrounds.

Solid Blacks Used in a Figure and Tree

White Figure against a Solid Black Ground

Use screen tone to add intermediate values.

Solid Blacks Used for Leaves

Black Clothing

Night Scenes

Special Effects

Try spattering black and white.

Use netting and a brush to render stars in a night sky, blood spatter, or other tiny speckles. These techniques do require skill, so be sure to practice first before trying this on the original copy..

Anyone can use spattering, once they learn how.

Spattering Tools and Materials

Spattering Net

Toothbrush

Hake

Masking Film

Stars

The Spattering Process

- 1 Use masking film to cover nontarget areas.

- 3 Remove the masking film.

Blood

- 2 Spatter the ink or paint using a brush and netting.

- 4 Finished!

Other special effects

Spattering effects can also be created even without netting. Simply take a *hake* dipped in ink and blow on the bristles. In addition, interesting results can also be obtained with an airbrush or gauze. Experiment with different materials. Please note, however, that the holes of an airbrush are extremely small and may result in speckles so fine that they become lost in the printing process.

Use a fingernail to flick the bristles.

Airbrush produces extremely fine speckles that cannot be clearly printed unless offset printing is used. While this may pose no problem for *doujinshi*, I recommend not using an airbrush with standard publication submissions.

Use gauze a tissue, or cloth to dab.

Soak gauze, a tissue, or a wide-weave cloth into ink and then gently dab it on the drawing's surface.

Always test on a separate piece of paper first!

Eeeek!

Stipple Dots

Try using stipple dots.

Stipple dots are perfect for creating tender, romantic scenes. Use a crow quill pen or a felt-tip pen.

Techniques for Rendering Stipple Dots

- 1 Use a template and a pencil for the under drawing.

- 2 With a pen, begin to add stipple dots over the under drawing. Gradually build up the desired shape creating cloudy and smooth value transitions.

Large,
Spaced
Dots

Tiny, Tightly
Packed Dots

The dots to the right are
finer than those to the left.

Use a felt-tip pen and Rotring ink for large dots. For small dots, use a crow quill pen held perpendicular to the paper.

Use a template for the
under drawing.

Circle Template

Shortcuts can
be nice when
you are just
starting out.

Ellipse Template

Stipple Dot Gradation

Use a little vigor when
adding stipple dots.

Various Uses of Stipple Dots

Clouds or Mist

Twinkling, Light, Hope

Light, Romantic Sentiment,
Hope, Love, Etc.

Speech Balloons,
the Moon, Stars

Using Line Stippling

Line stippling is effective for portraying mist, the sun, and the passage of time. Practice creating line stipples that have a uniform line thickness.

First, jot down in pencil a center point and several guidelines. Next, pen in with stipple lines, gradually building up the desired shape.

Display Lettering and Speech Balloons

Creating display lettering

Add display lettering illustrating the contents of the panel or words appearing in the composition directly to the drawing.

Creating speech balloons

Copy what you see in other artists' books and gradually develop your own originals.

Titles

When submitting a copy for standard publication, simply write down the title in pencil. If you intend to create the lettering yourself, execute the title on a separate piece of paper and indicate with your submission that, that is the preferred lettering.

Sample Title Lettering

Creating Your Own Title Lettering

Indicate your intended title by writing it in pencil.

Alternatively, the lettering could be attached over the original copy using transparent film.

Execute the title lettering on a separate piece of paper, overlay the original copy with a sheet of tracing paper, and indicate where the title should go.

Adding Speech Balloons

Use bursts to create thought balloons.

Use bursts as balloons to suggest that a character is imagining or wrapped in thought. To create a burst, first establish the center point, as you would with radiating lines. Use the *beta* flash technique with black backgrounds.

- 1 Mark the center point and lay out in pencil the general shape desired.

- 2 Draw the lines in pen heading toward the center point using a straightedge and rotating the paper as you go.

- 3 Finished!

Sample Bursts

Differences in the Sizes of Font for Different Magazines

The sizes of the font used for speech balloons vary greatly according to whether the magazine is intended for small children, young adults, etc. Give careful consideration to this point when planning dialogue.

1 Seinen, Shonen, Shoujo Magazines (Magazines for Adolescents and Young Adults)

This is the approximate line-to-line spacing.

9	8	7	6	5	4	3	2	1	
									1
									2
									3
									4
.	5
									6
									7
									8
									9

2 Child, Shonen, Shoujo Magazines that Include Phonetic Readings alongside Text

The line-to-line spacing is a bit more open than is standard.

9	8	7	6	5	4	3	2	1	
									1
									2
									3
									4
.	5
									6
									7
									8
									9

3 Pre and Elementary School Children Magazines and Emphasized Words

Really, really big lettering!

2	1		2	1		2	1
		1			1		
		2			2		
		3			3		
		4			4

		6			6		

Speech Lettering

Cellophane Tape

When adding open letters to a black background, attach tracing paper to the original copy and indicate the intended position.

Screen Tone 1

Types of screen tone

Screen tone, which has an adhesive backing for sticking to the original copy, comes in various forms. Visit your local art supplies shop and check out what is available.

Finished!

Gradation

Lines

Random Dots

Pattern Dots

Patterns

Clothing & Special Effects

Using Screen Tone

To render solids

White Screen →

A moiré effect may result when 2 screens are overlapped.

Moiré

Attaching screen tone

1

Remove the screen tone from its packaging and lay it over the original copy with the backing still attached.

2

Cut the screen tone slightly wide of the perimeter. Cut only the top layer and not the backing.

3

Remove the cut screen tone from the backing and lay it on the original copy.

4

Cut the tone following closely the perimeter of the target area.

5

Using a tone scrubber, rub the screen tone, securing it to the original copy.

Screen Tone 2

Etching screen tone

Screen tone is commonly etched or the edges blurred when it is used. Use your ingenuity and experiment with various etching materials: craft knives, erasers, sandpaper, etc.

Using a Craft Knife to Blur the Edge of Tone (*Bokashi*)

1

2

3

4

Burst

Points of Consideration When Etching

Use a steel straightedge to etch when creating a burst effect. Etch from the center point outward.

I used my plastic ruler just once, and I wrecked it.

Chewed up
Chunk missing

Backgrounds and Patterns All Depend on a Little Ingenuity

Come up with your own, original ideas!

There are many different clothing patterns and backgrounds that you could draw by hand. Those not using screen tone should come up with their own ideas and create something new.

Chapter 5

Depicting Greenery and 3-Dimensional Objects

It is not only people and animals that appear in *manga*. Plants and buildings appearing in the background are also important elements. Without being able to draw these elements properly, your *manga* will fail to be convincing. Be persistent and practice lots!

Insects

Practice drawing insects.

Insects have 3 body segments: the head, the thorax, and the abdomen. Sketch the rest of your bug after first plotting down these 3 fundamental segments. To draw complex insects accurately, refer to illustrated guides.

The insect's body is divided into 3 segments.

Spiders (arachnids) are divided into 2.

Fused head/thorax (cephalothorax)
Abdomen

Many insects fly.

The shapes of the body and wings vary from insect to insect, so make sure you refer to an illustrated guide.

Draw flowers, grass, and trees along with your bugs.

Try exaggerating your bug.

Particularly if you are producing *manga* targeted at preschoolers or *Shoujo manga* [*manga* for girls], try experimenting with your insects by giving them human attributes.

Flowers 1

Practice drawing flowers.

As with insects, when drawing flowers refer to an illustrated guide or to the actual flower. Pull the petals off the flower to get a better understanding of its construction. Feel free to go ahead and modify and exaggerate your flower according to whether the *manga* is serious or funny in content.

Dandelion

Tulip

Morning
Glory

Rose

Hydrangea

Sunflower

Gentian

Cherry
Blossoms

Drawing Leaves

Leaves come in an assortment of forms and allow you to create various effects. Experiment with leaves. If you are working on a *Shoujo manga* project, try using leaves as decorative patterns, etc.

Flowers 2

Intermingle flowers and leaves with the composition.

Intermingling flowers and leaves with the composition allows you to produce various interesting effects. Experiment with designs according to the composition and the type of *manga*.

Weaving a halo of flowers behind a character

Draping a garland around a character

Even in urban areas, where green has almost but disappeared, flowers possess the power to comfort the heart and can add a sense of beauty to even a dull landscape.

Grass and Trees 1

Practice drawing grass and trees.

When drawing trees together with grass, first sketch down the general shape of the tree and then add in the details.

Grass

Match together the grass tufts as appropriate.

Combine the grass designs and tree designs to create the background.

Grass and Trees 2

Add shadows to trees

Add shading to a tree to give it a sense of volume. When shading, consider where the light source is located. The more skillfully rendered the shadows, the more convincing the tree will appear.

The trunk is cylindrical in shape.

Screen tone is another viable option.

Assorted trees

Zelkova

Sycamore

Poplar

Pine

Willow

Gingko

Render trees in silhouette
for night scenes.

Assorted Leaves

Palm

Himalayan Cedar

Gingko

Maple

Oak

Bamboo

Grass and Trees 3

Draw trees in accompaniment to the background.

Draw the trees together with the backgrounds appearing in the story. Trees change in appearance depending on the season or on the angle from which they are viewed, so I recommend taking a visit to the park or woods and sketching or photographing the trees around you.

Night Scene

Bamboo Forest

Landscape

Willow Tree

Give your landscapes depth.

A landscape should have a sense of depth, so be sure to render close objects larger and in detail and far objects smaller and using finer lines overall. The same holds true for leaves: leaves close to the picture plane should be large, thick, and meticulously rendered, far leaves may include only a nebulous outline.

Why Include a Background?

Backgrounds are an integral part of the story. Rather than explaining where your characters are located using words, instead illustrate where they are through a landscape.

Further, landscapes have many components, including seasonal elements, buildings, etc. Draw a wide variety of objects in your landscape and expand your repertoire.

Water

Practice depicting water.

If you intend to draw water, first practice drawing wavy strokes in pen and then combine these strokes to form waves. Also, make good use of solid blacks to depict rough waves in order to suggest a river current.

Before all else, practice!

Build up a sea using combinations of wavy strokes.

Rough Waves

Water Surface

A Boat Excursion

Faucet

River

From *Itachikun* (Mr. Weasel)

Rocks and Stones

Practice depicting rocks and stones.

Rocks should be given a rough texture. A sense of volume can be obtained by using *gomi-kake* (dust crosshatching) and/or screen tone.

Stipple dots make up my rough surface.

Use *gomi-kake* to shade rocks.

Gomi-Kake and Screen Tone

The trick is to be familiar with the characteristics of rock and to define the direction of a light source.

Give rocks a rugged, jagged feel.

Cave

Fire and Smoke

Practice depicting fire and smoke.

When drawing fire or smoke, first start with the most basic shape and build it up. In addition, make audacious and bold use of display lettering when drawing explosions, etc.

A basic flame

Combine flame.

To complete a blazing fire.

Basic smoke

Adding smoke to fire

Fire

Explosion

The Weather and Atmospheric Conditions 1

Incorporate weather elements in *manga*.

An artist can tell a number of tales within one panel background. For example, in the panel to the right is a fall scene with clear skies taking place at dusk with a breeze blowing, and a young girl is late for her after school meeting with a young man in a park located in an urban residential area. Especially when switching scenes, draw the background in detail so that you can eliminate superfluous dialogue.

Illustrate the time and place pictorially, rather than relying on unnecessary explanations.

Depicting the wind

Breezes are invisible to the eye. However, hair, clothes, and grass tend to bend and flutter in the direction a breeze blows and, consequently, can be exploited to suggest the wind. Occasionally, artists add 1 to 3 curved lines to suggest a blowing breeze.

The Weather and Atmospheric Conditions 2

The sun

In *manga*, the sun and the moon are often used to suggest the passage of time. There are many different ways of depicting the sun, so think up a scene requiring the sun and give it a go!

Freehand

With a straightedge

With radiating lines

With screen tone

With line stippling

Light and Shadow

Light

Whenever drawing the sun, always consider the direction of light.

Backlighting

Feeling optimistic

Dusk and dawn

Showing the rising or setting sun is an effective means of expressing time. When switching scene locations, use your skills in suggesting dusk or dawn.

Shadow

The Glow at Sunrise/Sunset

Screen Tone

The Setting Sun

The Weather and Atmospheric Conditions 3

Night scenes

Use solid blacks and dark screen tones for night scenes. In *Shoujo manga*, occasionally the area around the panel is blackened with the story taking place in the inside panels. Think about what methods best suit your own personal style.

With Screen Tone

The Night Sky Shown through a Window

Suggesting Nighttime by Showing a Lit Streetlamp

Blackening the Area outside the Panel

Clouds

Draw clouds freehand, using screen tone or *gomi-kake* to add light and shadow so that the clouds will have a sense of volume. Combining *gomi-kake* with screen tone will make shadows extra dark..

Clouds in *Gomi-Kake*

Screen Tone + *Gomi-Kake*

Screen Tone

The Weather and Atmospheric Conditions 4

Rain

Draw rain either freehand or using a straightedge according to how strongly the rain is falling.

Torrential Downpour

Drizzle

Combine rain with other compositional components.

Rain may be drawn encircling but not touching characters or may be drawn coming down directly on the characters. Use your ingenuity to compose the scene, adding water ripples and droplets splashing to puddles or using white poster paint to suggest torrential rain.

After Rainfall/Rainbows

Splashing Water Droplets

Drizzle

Storms

Include rain, wind, and an abundance of speed lines when depicting a storm. Draw characters struggling to walk, and add other changes to suggest a storm.

Freehand

With a straightedge

For torrential rain, touches of white poster paint, etc.

Lightning

The Weather and Atmospheric Conditions 5

Snow

Snow may be depicted by scattering tiny circles about the composition and by using white poster paint, etc. I also recommend adding in the background various objects covered in snow.

Solid Black +
White Poster
Paint

Screen Tone +
White Poster
Paint

Snowstorm

Seasonal Indicators

Show the changing of the seasons.

When suggesting the changing of the seasons, include artistically playful panels as well.

Show the progression of the changing seasons by making these artistically playful panels increasingly narrow and small.

Props 1

Practice drawing a diversity of props.

Usually, artists look to the actual object for reference when drawing. Studying the actual object should allow you to produce a well-structured rendition, even drawing freehand. When drawing sci-fi related props, base the objects on reality, but add imaginative elements.

Exercise

1

First, picture a cup in your mind and draw it.

2

Next, look at an actual cup and draw it. This time the drawing should appear more realistic.

3

Lastly, draw the cup from various different angles: from its side, from above, etc.

Depicting solid objects

Knowledge of how to give objects depth is necessary to drawing props. Draw the full structure of the object, including lines in the under drawing that will be hidden in the finished product. This will help you preserve the object's structure.

Sphere

Triangular Prism

Cylinder

Cube

Half Sphere

Cone

Triangular Pyramid

Quadrangular Pyramid

Adding Light and Shadow

Changing Perspectives

Using the Laws of Perspective to Render Solid Objects

Props 2

Draw the things around you.

First, try drawing things around you with simple structures. Household appliances change in style according to when they were made, so look at a few catalogs and other sources for reference.

Understanding People's Personalities through Books

Use letters to get the message across

I love you!
I hate you!

Faxes can also be used in place of speech.

"Nice shot!"

Props 3

Combine props with action.

Combine the props you draw with people using them: show a vacuum cleaner being used to vacuum. Having your characters engage in simple actions will make your artwork more appealing.

Props 4

Practice drawing outdoor objects.

Do study sketches and take photos to use as reference when drawing outdoor objects. Remember: in *manga*, the setting is explained through pictures more than words.

Vehicles 1

Practice drawing vehicles.

When drawing vehicles, either use an actual vehicle as reference or look for reference materials. Dividing the structure of a car or other vehicle into multiple squares will allow you to arrive at a general form. Make good use of special effects and perspective to develop the atmosphere of the scene and a sense of speed.

The actions of the characters indicate whether they are getting into or out of the vehicles.

Add special effect lines to generate a sense of speed.

Drawing Cars

Oblique View

Ambulance

Bus

Truck

Bus Stop

Formula 1 Car

Motorcycle

Bicycle

Seat

Pedal

Traffic Lights and Street Signs

Vehicles 2

Trains

When drawing a train, use the square as your basic shape and use the laws of perspective to your advantage. For more information on perspective, see page 166.

Use the laws of perspective.

If you are having difficulty illustrating the train's destination, instead write it somewhere to explain where it is headed.

Front

Side

Turning a Curve

Even if the under drawing (sketch) includes curves, use a French curve, etc. when inking.

Refer to recent publications and new travel pamphlets to see the latest train models.

Dangerous locations are ripe areas for staging incidents.

Great ideas for comedy *manga* might even arise from a train ride.

Boats

Use the basic shape of a boat with a tapering front (bow) and a broad back (stern), adjusting the form as desired.

Front

Side

Sailboat (Barque)

Motorboat

Sailboat (Catboat)

Ocean Liner

Draw the boat small to make the water appear expansive.

Hydrofoil

Jet Ski

A deck scene: Include indicators of the characters' emotions.

Vehicles 3

Airplanes

To draw an airplane, start with an aerodynamic body and then add wings. Study travel pamphlets, etc. for reference.

Small Jets

If you have difficulty drawing an airplane, instead show the airport to suggest the concept of "airplane."

Onboard

Hot Air Balloon

Helicopter

Dirigible

Flying Saucer

Monoplane

Paraglider

Hang Glider

Sailplane (Glider)

Spy Plane

Destroyer

Tank

Buildings 1

Practice drawing buildings.

Including a building allows the *manga* reader to understand at a glance where the scene takes place, so use them when changing scene venues. Also, in view of the countless variety of buildings out there, take a look through illustrated guides or flyers to see what kind you hope to draw.

Let's take a look at what kinds of buildings there are.

Hospital

Police Box

[Note: The police box in Japan, called a "koban," is a small, neighborhood police office and is different from and not nearly the scale of a police station.]

Supermarket

Café

Church

High-Rises

Condominiums

Practice depicting interiors.

Usually, artists look to visual resources when drawing interiors. I also recommend sketching the inside of a typical home, school, or other location.

Kitchen/Dining Room

Hospital

Indicate locations in writing.

Grocery Store

Reception Desk

Bedroom

Café

Buildings 2

Draw basic buildings.

If the reader cannot figure out where the main character is, then your carefully constructed story will be for naught. Those of you who would like to draw buildings but find them too difficult should in the beginning stick with those buildings that anyone can draw well to suggest where the scene takes place.

When shifting scenes, use extra detail in the panel, adding signs, company names, dialogue, etc.

Build your skills bit by bit.

Start with a small house.

Then, increase the number of windows, building a bigger house.

Next, try making the house a little more complicated.

And then try spicing it up even more.

Here, the roof alone tells us where we are.

Now this is an easy solution and definitely better than not having written anything at all.

Enlarge the character and position lettering behind her. Now, everyone knows where we are!

Use the basic laws of perspective when drawing buildings.

Always rendering your buildings at the same size allows for little variety and will cause your *manga* to lose its appeal. Give some variation to the sizes of your buildings, changing their appearance to indicate whether they are close to or far from the picture plane.

Vary the sizes of the characters vs. the buildings.

- 1 First, draw two figures of the same size to one side of each panel.

- 2 Next, add a house to the blank area of each panel.

Refer to the discussion starting on p. 166 for more information.

Buildings 3

Try drawing a house.

Use a little ingenuity in angling the house and give it a sense of volume. If you absolutely have trouble with depth, then use a triangle and draw the house level to the picture plane.

1

The basic house:
Use a triangle
when drawing.

2

Shifting the direction and adding a bit of thickness gives the house a sense of volume.

3

Shifting the angle of lines A~B results in an even more 3-dimensional looking house.

4

Give large houses plenty of windows.

5

Then add a yard and a front gate, and voilà—a magnificent house!

Combine characters and buildings

A panel featuring a close-up of the face of a character superimposed over a relatively flat background will result in an acceptable composition, no matter where the figure is positioned. Experiment with different perspectives to see their effects. When showing an entire figure, pay careful note to the placement of the feet.

Doing the under drawing (sketch) first with a triangle and then using

freehand to ink results in a gentler, warmer image.

When drawing the entire figure, ensure that it matches its background.

Whenever you change a scene's location, remember to always draw a background.

Depth shown using primarily parallel lines

The trick to this technique is to create a flat composition out of an oblique angle.

Buildings 4

Try to draw a house with depth.

To draw a house with depth, first establish the general shape of the house as a 3-dimensional object, and then fill out the house, adding details.

How to Draw a House with Depth

- 1 Draw a rectangular solid and top it with a roof. Next, draw lines mirrored on opposite sides of the house parallel to each other.

A building's appearance changes according to the angle from which it is viewed.

Separating the roof from the walls results in simple solids.

Roof

Walls

+

+

+

+

- 2 Doors and windows are drawn parallel to the walls. Note that the roof should extend over the walls.

- 3 Give volume to the 3-dimensional house's elements. Once you have added the desired details, your house is finished!

Assorted buildings

Minka: Traditional Japanese House

Castle

Barn

Have you heard about the neighbors? (Whisper, whisper)

Yapl Yapl Crash!

Apartment Building

Western-Style Building

Tropical Island Bungalow

Mansion and Estate

Tent

Using Perspective 1

Practice using the laws of perspective.

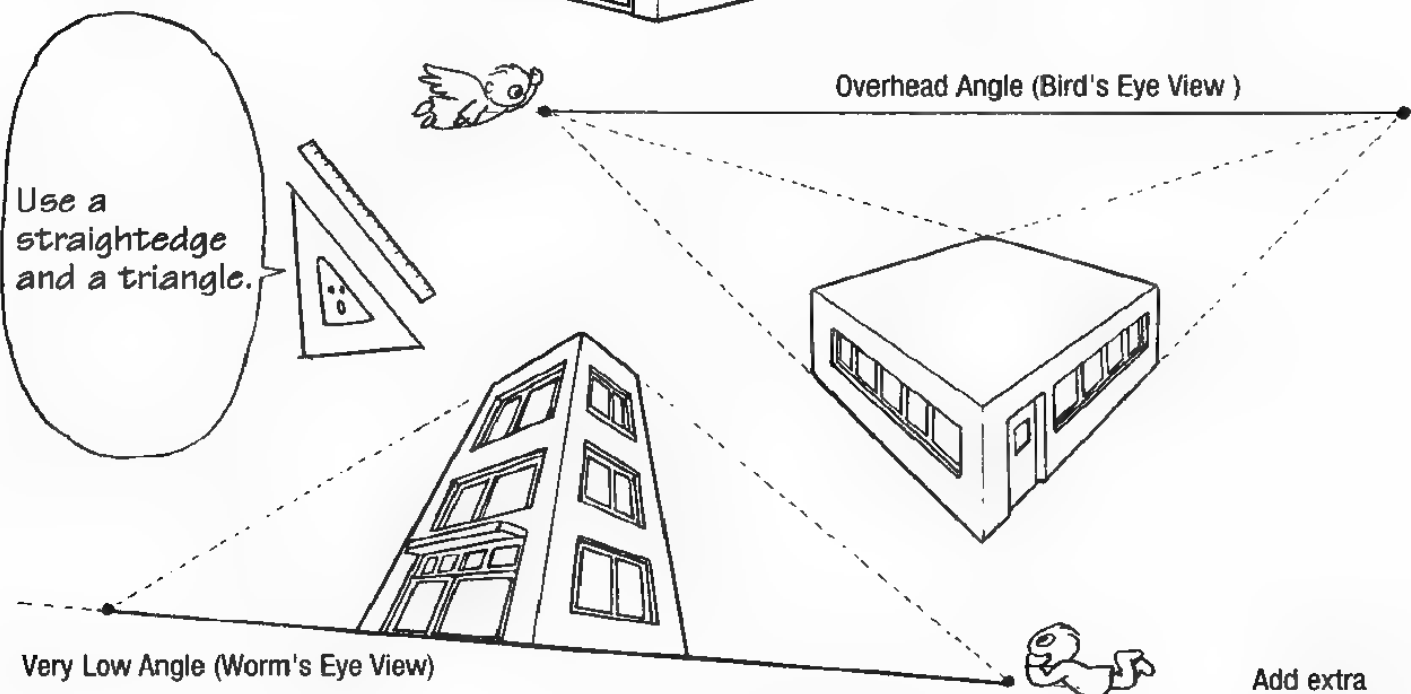

The laws of perspective involve the adding of a fixed vantage point to portray distance. When using the laws of perspective, lines converge on a vanishing point.

A building's appearance changes according to the angle from which it is viewed.

Close objects are rendered larger; far objects are rendered smaller.

Draw close objects large.

Keep distant objects small.

Add extra sheets of paper if your vanishing points lie somewhere outside of the original copy.

One-Point Perspective (One Vanishing Point)

Room
(Normal View)

2-Point Perspective (2 Vanishing Points)

Normal View

Worm's Eye
View

Bird's Eye View

Interior (Normal View)

3-Point Perspective (3 Vanishing Points)

Bird's Eye View

Worm's Eye View

Interior
(From a Low Angle)

Using Perspective 2

Practice using 1-point perspective.

1-point perspective is the most commonly used. It involves the use of only 1 vanishing point, and all of the buildings' lines converge to this point or fall somewhere on the horizon line.

1 Sketch the buildings and street.

2 The point at which the roofs and street converge is the vanishing point.

3 Draw the horizon line through the vanishing point.

4 Note that all of the buildings' lines moving to and away from the picture plane converge at the vanishing point.

5 Vertical building lines should be drawn perpendicular to the horizon line.

6 The depth lines of walls should be drawn parallel to the horizon line.

7 Bring together various different buildings.

8 Add the roof and windows to the walls.

9 Give volume to the roofline and windows.

10

Ink the composition, and then you're finished!

Make the background behind the street scene faded and indistinct.

Turns in roads require that the vanishing point be changed as well.

Adding mountains to the background turns the location into a mountain village scene.

Using Perspective 3

Practice drawing an interior using 1-point perspective.

Rooms are usually rendered in 1-point perspective. When drawing, pay careful attention to lines moving toward and away from the picture plane.

1

Sketch the facing wall and side wall. Mark the vanishing point somewhere on the facing wall. When only 2 walls will be depicted, fix the vanishing point where the ceiling and floor lines of the side wall will intersect.

When 3 walls will be depicted, set the vanishing point around the center of the facing wall.

2

Draw the ceiling and floor line of the side wall from the vanishing point.

3

Draw the horizon line through the vanishing point.

4

Draw the vertical (height) lines of the wall perpendicular to the horizon line.

5

Draw the ceiling and floor lines of the facing wall parallel to the horizon line.

6

Add doors and windows to the walls.

All lines converge on the vanishing point.

Add furniture to the room.

7

Practice drawing furniture in 1-point perspective.

Furniture and doors can also be drawn using the laws of perspective. Draw them according to how the walls and floor lie.

- 2 Draw the room in 1-point perspective.

- 1 Sketch the facing wall and the furniture:

- 3 Draw where the furniture touches the floor and walls.

- 4 Give the furniture height and depth.

- 5 Draw in the furniture's detailing.

Comparison of 2-Point vs. 3-Point Perspective

2-Point Perspective

3-Point Perspective

Using Perspective 4

Practice using 2-point perspective.

2-point perspective is where the impression is created that a building is viewed from its corner, causing the other 2 sides to appear to retreat into 2 vanishing points.

2 Vanishing Points

- 1 Sketch a building seen from a corner.
- 2 The points where the rooflines intersect with the street become designated the vanishing points.
- 3 Draw the horizon line through the vanishing points.
- 4 Make sure vanishing point B is positioned along the horizon line.

- 5 There are basically 2 sets of lines on a building drawn in 2-point perspective: those lines converging on the vanishing points and those lines parallel and perpendicular to the horizon line.

- 6 Finished!

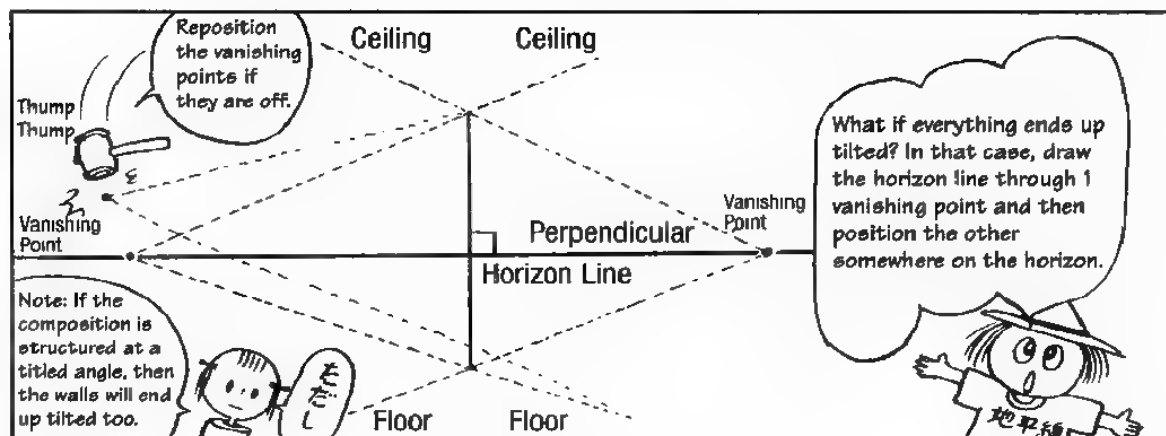

Practice drawing an interior using 2-point perspective.

- 1** Draw a corner view of a room, sketching in the walls and windows.
- 2** Extend the ceiling and floor lines until they intersect. These junctions become the vanishing points.
- 3** Connect the vanishing points with the horizon line.

- 4** Draw the vertical (height) lines of the walls perpendicular to the horizon line.

When you make your own drawing, make sure the vanishing points are separated more than the ones in this figure, ok?

- 5** Only the vertical lines are drawn perpendicular to the horizon line. All other lines converge on the vanishing points.

- 6** Add in the furniture to finish.

Using Perspective 5

Practice using 3-point perspective.

3-point perspective is usually used to depict a worm's eye view (ground-level perspective) or a bird's eye view (overhead perspective). Lines of height, width, and depth all converge on 3 vanishing points.

Drawing interiors

When a room is drawn in 3-point perspective, lines are drawn toward the 3 vanishing points. Take careful note in that if the room is drawn from a worm's eye view, then figures will also be viewed from floor level.

When you draw the room yourself, make sure the vanishing points are drawn farther apart than here. Got it?

Oops! Ran out of paper.

Vanishing Point

Combine characters with settings drawn in perspective.

Placing characters amongst buildings will give your artwork a greater sense of depth.

Include only the door and window, adjusting the height of the figure to the door.

Have figures extend outside of the panel.

Combine a close-up of a character with a partial view of a building.

A very long line

This figure still shows use of just 1-point perspective.

Drawing Buildings with People

School Scenes

To suggest a school, draw the school entrance gate. This will allow you to indicate whether it is an elementary school, high school, or otherwise in one fell swoop.

School backpacks make excellent drums! (Tee hee)

Chair and Desk

Be accurate when you make the preliminary sketch (under drawing).

Workplace scenes

Making good use of signs is also great for distinguishing between different work venues. To get an idea of specific designs, either take a few reference pictures yourself, or go to the library and take a gander at a few books.

Low and High Angles 1

Take a look at figures from low and high angles

The overall balance of a figure changes depending on whether it is viewed from a low or high angle.

Warning: Showing the undies of adult men and women is a definite no-no.

Low Angle (Looking Up from a Low Angle)

Exaggerated use of foreshortening produces this:

High Angle (Looking Down from a High Angle)

The neck is obscured from view.

Backgrounds with low and high angles

Perspective, whether it be from a high or low angle, affects the appearance of buildings and other background elements along with their character inhabitants. Practice using perspective techniques.

A Scene with Just a Hand

A Scene with Just the Legs

Background Seen from a Low Angle

Use this in scenes where the lead character is preparing to "face the future," or other such scenes requiring impact.

Background Seen from a High Angle

Use this when changing scenes and showing a character's entire figure within a single, small panel.

The human figure may be rendered in 2-point perspective as well.

When not including buildings within a background, another option is to cut out the backgrounds of other panels and include them in the target panel.

Low and High Angles 2

Buildings and people in low or high angles

When buildings are shown at a low or high angle, the composition of characters appearing in the panel must also be modified accordingly.

A character close-up

Figures at ground level appear small.

When including an entire figure, match the feet to the horizon line.

When a building is shown from an overhead perspective, people are seen from that angle as well. Take careful note of how figures appear according to their position.

Points of attention when drawing buildings and people

When using perspective to draw buildings, pay careful note to figures' heights: adjust figures' heights according to the sizes of doors and peripheral objects..

Windows can also be used to adjust a character's height.

Adjust characters' heights according to door sizes.

Use the laws of perspective to determine character sizes. Far figures should be drawn smaller.

Compare the sizes of the buildings, people, and cars when drawing.

If you have made an error that you cannot fix in a jiffy with white poster paint or something similar, then try cut and paste. Cut out the area requiring correction and substitute it with a replacement drawing. Attach the replacement piece to the back of the original copy with adhesive tape, and do any necessary touch-ups with white poster paint, etc.

Cut and Paste

Cut and Paste Step I: Basic Cut and Paste

Cut a piece of paper slightly larger than the area to be replaced, attach it to the original copy, and redo the drawing.

Cut and Paste Step II

Copies to be submitted for publication must have as clean a finish as possible. Attach a replacement piece to the reverse side of the original copy, cutting it slightly larger than the panel to be replaced. Attach the piece with removable tape.

You should now have a replacement piece the same size as the panel to be replaced. Place this piece into the cut out area of the original copy and attach with tape.

Front Side of Original Copy

Use an adhesive tape that will not yellow or change color.

Chapter 6

Creating Well-composed Manga

Sloppy *manga*, no matter how well drawn, is just not appealing. It is critical that *manga* be visually easy to follow. In this chapter, we discuss how to draw *manga* so that it will be easy to read, panel design, and other important topics.

Compositions 1

Use a little ingenuity with compositions.

Even if your panel is well composed including both a background and characters, if the panels always feature characters similarly posed, then your overall work will be monotonous. Add variety to your compositions and show care toward maintaining your readers' interest.

E.g. Add a little variety to your compositions.

Ordinary composition

Overlap figures and enlarge those close to the picture plane.

Low angle composition

Symmetrical composition

Adjust the composition's right to left balance.

Triangular composition

Circular composition

Assorted Compositions

Angled Compositions

Suggest speed by drawing the characters at an angle.

Tilt the panel.

Shift the panel's focus to one side.

Strategically position close-ups together with long shots.

Increase the feeling of speed by tilting a figure against special effect lines.

Compositions 2

Tell the story through pictures.

Story *manga* requires that the questions "When?" "Where?" "Who?" and "Did what?" be skillfully addressed. Consequently, the artist must suggest as much as possible of the scene visually, answering these questions for the reader, while using his or her ingenuity to keep the reader interested.

Don't think about when and where in your head. Just draw it naturally. Here is a possible way of handling it.

When:

While watching TV, while at home alone, while studying, while on the phone, while eating, while drinking, while waiting, while getting angry at someone, yesterday — any sort of time is acceptable

Where:

At home, inside a car, on the stairs, on a boat, by a window, under a bridge, in a tree, lost on a road somewhere, in bed, on the toilet, inside a store, at a desk.

Sample

Here, the characters' lines provide the reader with information.

Here, information is provided through narration.

Here, the boys' names are introduced.

Two are brothers.

Rather than having the girl blurt out that she is in love, have another character verbalize this.

The girl is not related to the boys.

From Mikka Jo [Roughly, "The Three-Day Castle"]

A sign indicates that the location is a publishing company.

Here, a magazine article introduces the creature, Fumfum.

This is that infamous gorilla/human baby that was the talk of all the gossip rags 14 years ago.

Yes.

Sakai, could I speak with you?

Spoken line

The dialogue indicates the characters are a department chief and a staff member.

Just when the reader thinks Sakai is a straight-faced character, it is revealed that he's a bit of a letch.

Monstrous creature, huh? Gotta be kidding. Now, a luscious babe would be a different matter.

There have been reports of a monstrous creature sighted on a certain island.

Here, information is given through character lines.

All right, chief.

Get me the low down on this one.

So, this seems like Sakai will be covering this story.

Having to read all this background stuff is such a chore.

Just illustrate this information instead.

Too much written information will just tire the reader. Instead, show this information visually, maintaining a fast pace to the scenes, while simultaneously not compromising the flow of the story.

And yet, something's different.

It's the same, old street.

I wonder what.

Hey, Matchi. What's up?

Takki!

Huff, huff

Show changes through pictures rather than words.

Panel Design

Study panel design.

In the case of Japanese *manga*, which features script read top to bottom, the panels progress from right to left. It is vital that you give careful consideration to panel design, so that the reader will be able to follow the panels in the correct order.

In Japan, vertical script is read from top to bottom and right to left.

Good Panel Design

Bad Panel Design

For example, let's say you are playing a follow-the-grid lot game.

If you came to a point on the grid with lines at the same level, you would probably get confused as to which way to go.

Panels Read Vertically

As with 4-panel layouts, shift the gutter between the panels.

And, add an extra panel in between.

Unusual Layouts

The corner panels should either show basic lines or a background.

Design the layout so it is easy to follow.

This is not a good panel design.

This layout is a mishmash.

Those using horizontal script could either trace or copy this layout and reverse it.

Take spread page layouts into consideration when planning the panel design.

The last panel should be a "grabber," capturing the reader's interest to ensure he or she continues reading.

Make sure the right and left pages are balanced.

Enlarge a single panel on one page to create an eye-catching, key scene.

The artwork extends all the way to the bottom or top of the page, without being bound by margin lines.

In order to draw well-developed *manga*, you will have to go beyond that which is familiar to you. Otherwise, you will soon run out of subject matter. Consequently, if there is a topic unfamiliar to you, but that you would like to try drawing, look it up. So, now the question of how remains.

In order to draw well-developed *manga*, you will have to go beyond that which is familiar to you. Otherwise, you will soon run out of subject matter. Consequently, if there is a topic unfamiliar to you, but that you would like to try drawing, look it up. So, now the question of how remains.

Afterword

Osamu Tezuka is the first pioneer, the father of *manga*. I, however, am devoted to *shoujo manga*. I initially fell in love with the story manga works of Eiko Mizuno and Machiko Satonaka and later found myself working as a comedy *manga* artist (a turn of events that still mystifies me). Sometime later and over the span of 5 years, I compiled the notes for this book, concerning those matters I felt necessary to develop one's artistic ability from the type of *manga* even an elementary school student could produce to a full-fledged professional artist, based upon my experiences, including time spent in manga workshops.

However, it is thanks to Mr. Masujima and other members of Graphic-sha's staff that I am finally able to publish this book. I am truly grateful to you.

I sincerely hope that some of the readers find this book informative and become future professional *manga* artists.
